A Modern Approach to Functional Programming

Objects First with Java: A Practical Introduction is an introduction to object oriented programming for beginners. The main focus of the book is general object oriented and programming concepts from a software engineering perspective. The first chapters are written for students with no programming experience with later chapters being more suitable for advanced or professional programmers. The Java programming language and BlueJ the Java development environment are the two tools used throughout the book. BlueJ's clear visualisation of classes and objects means that students can immediately appreciate the differences between them and gain a much better understanding of the nature of an object than they would from simply reading source code. Unlike traditional textbooks the chapters are not ordered by language features but by software development concepts. The Sixth Edition goes beyond just adding the new language constructs of Java 8. The book's exploration of this new language demonstrates a renaissance of functional ideas in modern programming. While functional programming isn't new in principle it's seen a boost in popularity based on the current computer hardware available and the changing nature of projects programmers wish to tackle. Functional language constructs make it possible to efficiently automate currency make use of multiple cores without much effort on the side of the programmer are both more elegant and readable and offer great potential in solving the issue of parallel hardware. Functional programming has become an essential part of the field and *Objects First with Java* gives students a basic understanding of an area they'll need to master in order to succeed in the future.

Objects First with Java David J. Barnes, Michael Kölling, 2012. This is the only introductory programming textbook that uses the BlueJ integrated development environment IDE to teach introductory and object oriented programming principles using Java. Its close integration with the BlueJ development environment allows this book to focus on key aspects of object oriented software development from day one. BlueJ's clear visualization of classes and objects means that readers can immediately appreciate the differences between them and gain a much better understanding of the nature of an object than they would from simply reading source code. Unlike traditional textbooks the chapters are not ordered by language features but by software development concepts. Language features are introduced as a response to the problems to be solved. A large number of different interesting projects are used to provide variety and avoid the monotony of a running problem. This book takes an objects first approach to teaching the traditionally difficult concepts of objects in a manipulative visual form. Throughout the emphasis is on developing a practical approach to programming with students encouraged to add code to existing programs rather than working with an intimidating sheet of blank paper. This textbook is printed in four color to aid pedagogy and reader learning.
