The Evolution of Behavior George Gaylord Simpson, Anne Roe, 1960 *The Evolution of Behavior* Jerram L. Brown, 1975 *The Evolution of Behavior and the Role of Behavior in Evolution* Martin Moynihan, 1973 *The Role of Behavior in Evolution* Henry C. Plotkin, 1988 These six original essays focus on a potentially important aspect of evolutionary biology the possible causal role of phenotypic behavior in evolution Balancing theory with actual or potential empiricism they provide the first full examination of this topic Plotkin s opening chapter outlines the conceptual minefields that the contributors attempt to negotiate What is an adequate theory of evolution What is behavior and is it possible to maintain a distinction between behavior and other attributes of the phenotype is all or only a special subset of behavior both a cause and a consequence of evolution And what do the theoretical issues mean in empirical terms He concludes that any attempt to understand the causal role of behavior in evolution requires a more complicated theoretical structure than that of orthodox neoDarwinism a conceptualization of behavior as a distinctive set of phenotypic attributes and the accumulation of more data David L Hull Northwestern University provides an alternative account of the evolutionary process by developing a hierarchy of replicators interactors lineages to replace the traditional one of genes organisms species Robert N Brandon Duke University also posits hierarchy as an appropriate architecture for the theoretical complexity needed to support an examination of the role of behavior in evolution F J Odling Smee Brunei University outlines a theoretical structure to encompass the behavior of phenotypes concentrating on the unrestricted definition of behavior everything that an animal does The remaining chapters are as much concerned with evidence as with theory Plotkin concentrates on a restricted definition of behavior behavior that is a product of choosing intelligence reviewing our empirical knowledge of how learning might influence evolution R I M Dunbar University College London uses empirical studies of vertebrate social behavior to deal with the question of how the social systems especially of primates might have a causal role

The Evolution of Agency Michael Tomasello, 2022-09-06 A leading developmental psychologist proposes an evolutionary pathway to human psychological agency Nature cannot build organisms biologically prepared for every contingency they might possibly encounter Instead Nature builds some organisms to function as feedback control systems that pursue goals make informed behavioral decisions about how best to pursue those goals in the current situation and then monitor behavioral execution for effectiveness Nature builds psychological agents In a bold new theoretical proposal Michael Tomasello advances a typology of the main forms of psychological agency that emerged on the evolutionary pathway to human beings Tomasello outlines four main types of psychological agency and describes them in evolutionary order of emergence First was the goal directed agency of ancient vertebrates then came the intentional agency of ancient mammals followed by the rational agency of ancient great apes ending finally in the socially normative agency of ancient humans Each new form of psychological organization represented increased complexity in the planning decision making and executive control of behavior Each also led to new types of experience of the environment and in some cases of the organism s own psychological functioning leading ultimately to humans experience of an objective and normative world that governs all of their thoughts and actions Together these proposals constitute a new theoretical framework that both broadens and deepens current approaches in evolutionary psychology
