Synthetic Metalcontaining Polymers:

Synthetic Metal-Containing Polymers Ian Manners, 2006-05-12 The development of the field of synthetic metal containing polymers where metal atoms form an integral part of the main chain or side group structure of a polymer aims to create new materials which combine the processability of organic polymers with the physical or chemical characteristics associated with the metallic element or complex This book covers the major developments in the synthesis properties and applications of synthetic metal containing macromolecules and includes chapters on the preparation and characterization of metal containing polymers metallocene based polymers rigid rod organometallic polymers coordination polymers polymers containing main group metals and also covers dendritic and supramolecular systems The book describes both polymeric materials with metals in the main chain or side group structure and covers the literature up to the end of 2002 Frontiers in Transition Metal-Containing Polymers Alaa S. Abd-El-Aziz, Ian Manners, 2006-10-25 A detailed up to date review of transition metal containing polymers Promising advances in the electrical optical magnetic biological and catalytic properties that metal containing polymers possess have led to notable expansion in the field of transition metal containing polymers Frontiers in Transition Metal Containing Polymers provides a comprehensive up to date review of the synthesis properties and applications of transition metal containing polymers including an overview of the historical development of these types of polymers Written by the leading researchers in the field this thorough volume covers the routes to organometallic and coordination polymers as well as characterization and applications of transition metal containing monomers and polymers Other topics discussed include Metallo supramolecular coordination polymers based on nitrogen ligands Coordination polymers based on phosphorus ligands Polypeptide based metallobiopolymers and DNA based metallopolymers Metallo dendrimers Self assembly of metal containing block copolymers Applications including drug delivery optics molecular devices sensors conductive materials and more **Metal-Containing Polymeric Systems** John E. Sheats, Charles E. Carraher Jr., Charles U. Pittman, 2012-12-06 Research on metal containing polymers began in the early 1960 s when several workers found that vinyl ferrocene and other vinylic transition metal complexes would undergo polymerization under the same conditions as conventional organic monomers to form high polymers which incorporated a potentially reactive metal as an integral part of the polymer structures Some of these materials could act as semi conductors and possessed one or two dimensional conductivity Thus applications in electronics could be visualized immediately Other workers found that reactions used to make simple metal chelates could be used to prepare polymers if the ligands were designed properly As interest in homogeneous catalysts developed in the late 60 s and early 70 s several investigators began binding homogeneous catalysts onto polymers where the advantage of homogeneous catalysis known reaction mechanisms and the advantage of heterogeneous catalysis simplicity and ease of recovery of catalysts could both be obtained Indeed the polymer matrix itself often enhanced the selectivity of the catalyst **Metal-Containing Polymeric Materials** Charles U.
