Doré Landau, Gianluca Zito, 2007-05-11 The extraordinary development of digital computers microprocessors microcontrollers  
and their extensive use in control systems in all fields of applications has brought about important changes in the design of  
control systems Their performance and their low cost make them suitable for use in control systems of various kinds which  
demand far better capabilities and performances than those provided by analog controllers However in order really to take  
advantage of the capabilities of microprocessors it is not enough to reproduce the behavior of analog PID controllers One  
needs to implement specific and high performance model based control techniques developed for computer controlled  
systems techniques that have been extensively tested in practice In this context identification of a plant dynamic model from  
data is a fundamental step in the design of the control system The book takes into account the fact that the association of  
books with software and on line material is radically changing the teaching methods of the control discipline Despite its

interactive character computer aided control design software requires the understanding of a number of concepts in order to be used efficiently The use of software for illustrating the various concepts and algorithms helps understanding and rapidly gives a feeling of the various phenomena
