Operation and Maintenance of Large Infrastructure Projects J.S. Jensen, 2018-12-19 Major Infrastructure links across water represent large investments The structures and systems must be optimised to keep costs in control Optimisation needs and the tendency to more slender and light structures imply that engineering disciplines like Bridge Aerodynamics and Ship Collision Analysis have an increasing impact on the overall design of links Also the attention to life cycle costs implies Operation and Maintenance must to investigated and planned in parallel to the design and construction of the links The 1998 International Symposium aims at presenting state of the art and future development within the three mentioned engineering disciplines Exploring the many facets of major infrastructure projects this symposium concentrated on developments within organisational strategic and policy areas and both traffic and o m management Contributors to the papers include operators consultants and international experienced owners

Urban Transportation Abstracts ,1985

An Integrated Systems Approach to the Development of Winter Maintenance ,2006 Winter road maintenance operations require many complex strategic and operational planning decisions The five primary problems involved in this intricate planning procedure include locating depots designing sectors routing service vehicles scheduling vehicles and configuring the vehicle fleet The complexity involved in each of these decisions has resulted mainly in research that approaches each of the problems separately and sequentially which can lead to isolated and suboptimal solutions After discussing the complexity of the relaxed subproblems that would need to be solved to optimize the intricate winter maintenance operations the research turns to a heuristic approach to more feasibly address the interrelated problems This report subsequently presents a systematic heuristic based optimization approach to integrate the winter road maintenance planning decisions for depot location sector design vehicle route design vehicle scheduling and fleet configuration The approach presented is illustrated through an example of public sector winter road maintenance planning for a rural transportation network in Boone County Missouri When applied to the real world winter road maintenance planning problems for Boone County the methodology delivered very promising results The solution methodology successfully achieves the objective of a more integrated and less sequential approach to the problems considered The integrated solution would allow the Missouri Department of Transportation MoDOT to maintain the same high level of service with significantly fewer resources The results indicate that this methodology is a successful step towards solving realistic multiple depot problems involving heterogeneous winter maintenance fleets

Needs Assessment Study of the Iowa DOT Maintenance Facility Construction Needs ,1989 The purpose of this study is to provide recommendations

relative to the location and construction needs for highway maintenance facilities within the state of Iowa These recommendations were to be developed with consideration being given to the public s expectations and priorities for highway maintenance services As a part of the study effort a review was made of the methods used by other states to deliver highway maintenance services To accomplish the study Wilbur Smith Associates undertook a series of tasks These efforts included gathering of data and information to characterize the various maintenance programs and the delivery of maintenance and operations services by the Department We researched the delivery of highway maintenance services in other states Interviews with Iowa DOT maintenance personnel were accomplished A schedule of public hearings was developed and ten hearings were held All the information was integrated and various analyses were made From these analyses we drew conclusions and developed recommendations
