Abstract:- The new trends in library and information science field it includes research data management, rethinking of library space, web catalogue, gamification, social media etc...

Keywords:- Research Data Management, Gamification, Virtual Reality

Introduction: - Libraries are continually developing to address the issues of their differing networks. A long way from being a basic store of books and media, the present libraries fill in as priceless assets for everything from information examination(RDM) to 3-D printing and starting exercises in coding.

Acquisition of periodicals in academic libraries in an ever growing price context

Periodicals also referred to as serials, journals or magazines are important sources of information and vital to the academic world because they contain more recent information than books and often the latest information on any given subject.

For the purpose of publishing scientific work, Periodical is an essential part of the academic library collections. Universities and institutions normally subscribe a large number of periodicals for their libraries.

For the last two decades, the periodical publishing Industries has changed significantly. Due to increase in prices of periodicals, libraries struggle to keep their budget in control. Combination of these facts means it harder than ever for academic libraries to continue all ongoing periodical subscription.

The acquisition services face the challenges of to how to maintain the quality of their periodicals collection and acquisition of services in this context. Some Universities or Institution made digital subscriptions that tend to be cheaper and some other libraries have developed collaborative modes of acquisition by merging their catalogues allowing the periodical available but at the same time paying for a single copy of it by sharing the amount among the libraries that decide to work together. To acquire and maintain quality periodicals in the library some factors will contribute significantly. The factor need to consider for this issue is as follows:

Research Data Management/ Data Analytics: -

Information examination (DA) is the way toward inspecting informational indexes so as to make determinations about the data they contain, progressively with the guide of specific frameworks and programming.

Trends in Library and Information Studies Aijaz Ahmad Bhat, 2014-02-19 Library and information science education has developed into a distinct discipline to meet the growing dimensions of library service and the changing needs of the society Library as a social organ has certain social obligations These obligations vary with the educational and cultural needs The personnel working in libraries must have proper library education then only they can use and implement the library techniques effectively to suit the requirements of the users Presently library education is being provided by a variety of institutions such as traditional universities open universities deemed universities polytechnics affiliated colleges professional associations and documentation centres etc Common trends noted in the growth of LIS schools around the world are review and revision of curricula increased use of ICT decrease or increase in the number of students amalgamation and reorientation Library and Information Science Education is no more an education for the managers of libraries only but has become an education for the consumers of knowledge also It is a change from managing libraries by librarians to manage the flow of information by one and all Earlier LIS students after the education became librarians now professionals teach this science and learners choose this profession to manage the information The need of mere library schools is over in the present context Better schools having adequate finance physical and library facilities equipment and qualified and experienced faculty is the need of the hour The LIS schools should aim at educational excellence and serve as pacesetters Such schools should try to produce a new breed of professionals capable to successfully perform their role in the fast changing information needs of the society using new information technologies such as word processors dedicated special purpose microcomputers

and telecommunication technology The library schools should assume the role of leadership and responsibility to produce competent manpower for the present as well as future needs of different kinds of information centres including university libraries It is often said that the future is uncertain but the future of LIS professionals can be visualised now itself unless and until necessary measures are taken by the LIS teachers in particular to train the forthcoming incumbents with the most up to date curriculum emphasizing more on ICT skills so as to prepare the information professionals for leadership role Mere blaming the librarians is not a solution to the visibility of librarianship but at the same time a unique accreditation or certification system quality of education and distance education trend has to be monitored
