Technology in American Water Development Edward Augustus Ackerman,1967 Water Technology United States. Department of the Interior,1971 *Technology in American Water Development* Edward A. Ackerman,George O. Lof,1977-06-01 Department of the Interior and Related Agencies Appropriations for 1978 United States. Congress. House. Committee on Appropriations. Subcommittee on Department of the Interior and Related Agencies,1977 Water, Technology and Development Martin Hvidt,1998-12-31 Egyptian agriculture is uniquely dependent on water with over 95 per cent of agricultural production originating from land irrigated by the Nile The improvement of irrigation systems and better control over water by farmers is therefore crucial to the drive to raise productivity in the current context of scarce water resources rich but underutilized land and changes in the institutional environment of the economy after liberalization This text evaluates the ambitious state of the art Irrigation Improvement Project IIP and should be of interest to all those concerned with issues of water and development in the Middle East *Department of the Interior and Related Agencies Appropriations for Fiscal Year 1976* United States. Congress. Senate. Committee on Appropriations,1975 Technology in American Water Development Edward Augustus Ackerman,George O. G. Löf,Conrad Seipp,1957 **Department of the Interior and Related Agencies Appropriations for Fiscal Year 1978** United States. Congress. Senate. Committee on Appropriations. Subcommittee on the Department of the Interior and Related Agencies,1977 Department of the Interior and Related Agencies Appropriations for 1976 United States. Congress. House. Committee on Appropriations. Subcommittee on Department of the Interior and Related Agencies,1975 Belief-based Energy Technology Development in the United States Chi-Jen Yang,2009 This book is a comparative study of two energy policies that illustrates how and why technical fixes in energy policy failed in the United States In the post WWII era the U S government forcefully and consistently endorsed the development of civilian nuclear power It adopted policies to establish the competitiveness of civilian nuclear power far beyond what would have occurred under free market conditions Even though synthetic fuel was characterized by a similar level of economic potential and technical feasibility the policy approach toward synthetic fuel was sporadic and indeterminate The contrast between the unfaltering faith in nuclear power and the indeterminate attitude toward synthetic fuel raises many important questions The answers to these questions reveal provocative yet compelling insights into the policy making process The author argues that these diverging paths of development can be explained by exploring the dominant government ideology of the time or ideology of the state as the sociology literature describes it The forceful support for nuclear power was a result of a government preoccupied with fighting the Cold War The U S national security planners intentionally idealized and deified nuclear power to serve its Cold War psychological strategy These psychological maneuverings attached important symbolic meaning to nuclear power This symbolism in turn explains the society wide enthusiasm The fabricated myth of the Atomic Age became a self fulfilling prophecy and ushered in a bandwagon market On

the other hand a confused indeterminate and relatively powerless welfare state stood behind synthetic fuel The different ideologies of the state explain the government's different attitudes toward nuclear and synfuel endeavors The overarching discovery is a mode of belief based decision making in long term energy planning This discovery goes against the prevalent assumption of rational choice in social sciences The author argues that rational choice assumption is inapplicable because of the extreme long term nature of energy planning It is not usually possible to predict the sociopolitical and economic conditions in the distant future Rational decisions require supporting information which often includes impossible long term foresights One cannot rationally choose between one unknown and another unknown Pivotal decisions in long term energy planning must inevitably be belief based and beliefs are subject to political manipulation and distortions by social mechanisms Understanding these peculiar but pervasive characteristics of energy business bears important lessons for today's decision making about energy technologies and the stakes if anything are even higher than before Energy policy communities historians of the Cold War American history and technology and sociologists would find this book an invaluable resource

Society - Water - Technology Reinhard F. Hüttl, Oliver Bens, Christine Bismuth, Sebastian Hoechstetter, 2015-11-02 This book presents the results of the Interdisciplinary Research Group Society Water Technology of the Berlin Brandenburg Academy of Sciences and Humanities It describes interdisciplinary evaluation criteria for major water engineering projects MWEPs and portrays an application to the Lower Jordan Valley Middle East and the Fergana Valley Central Asia Both areas are characterised by transboundary conflicts by challenges due to demographic and climate change and by political and societal pressures Based on the findings the book provides recommendations for

science and political decisions makers as well as for international financing institutions In addition it outlines research gaps from an interdisciplinary perspective In the past MWEPs have been used as an instrument to cope with the demands of growing populations and to enhance development progress Experiences with MWEPs have shown that a purely technical approach has not always brought about the desired results In many cases MWEPs have even resulted in negative implications for society and environment Therefore improved management strategies and enhanced technologies for a sustainable water resource management system are a prerequisite to meet present and future challenges And moreover the continuous evaluation and optimisation of these measures is likewise a must **Congressional Record** United States. Technology Review ,1921 *Water, Technology and the Nation-State* Filippo Menga,Erik Swyngedouw,2018-05-15 Just as space territory and society can be socially and politically co constructed so can water and thus the construction of hydraulic infrastructures can be mobilised by politicians to consolidate their grip on power while nurturing their own vision of what the nation is or should become This book delves into the complex and often hidden connection between water technological advancement and the nation state addressing two major questions First the arguments deployed consider how water as a resource can be ideologically constructed imagined and framed to create and reinforce a national identity and secondly how the idea of a nation state can and is materially co constituted out of the material infrastructure through which water is harnessed and channelled The book consists of 13 theoretical and empirical interdisciplinary chapters covering four continents The case studies cover a diverse range of geographical areas and countries including China Cyprus Egypt Ethiopia France Nepal and Thailand and together illustrate that the meaning and rationale behind water infrastructures goes well beyond the control and regulation of water resources as it becomes central in the unfolding of power dynamics across time and space **The Canadian Mining and Metallurgical Bulletin** ,1928 **The New Zealand Journal of Science and Technology** ,1922
