Advanced Renewable Energy:

Advanced Renewable Energy Sources Gopal Nath Tiwari, Rajeev Kumar Mishra, 2015-11-09 This book is an ideal reference text for teaching renewable energy to engineering and science students as well as a reference book for scientists and professionals doing self study on the subject The book has twelve chapters and starts with the definition and classification of renewable and non renewable energy and their status at global level This chapter also contains the basic heat transfer mechanisms and laws of thermodynamics It then deals with availability of solar radiation at different latitudes and energy and exergy analysis of flat plate collector solar air collector solar concentrator evacuated tube collector solar water heating system solar distillation and solar cooker The following chapter discusses the basics of semiconductor its characteristics working characteristics of solar cell in dark and daylight situation fundamentals of characteristic curves of semiconductor fundamentals of PV module and array and some PVT systems Detailed discussion on biomass bio fuels and biogas and their applications and the power produced by them namely bio power is covered in the following chapters Other renewable energy sources like hydropower wind and geothermal are then covered as well as a chapter dealing with the working principle basic theory and the capability to produce power from ocean thermal tidal wave and animal energy conversion systems Subsequently net CO₂ mitigation carbon credit climate change and environmental impacts of all renewable energy resources are all covered followed by a discussion on the techno economic feasibility of any energy sources as the backbone of its success and hence energy and economic analysis The chapters deal the overall exergy of renewable energy sources by using the thermal and mechanical power and electrical energy as output SI units are used throughout the book in solving various exercises in each chapter and conversion units of various physical and chemical parameters of metals and non metals are also given in appendices

Advanced Renewable Energy Conversion Technologies and Power Plant Engineering Md Hasanuzzaman, 2025-09-01 Advanced Renewable Energy Conversion Technologies and Power Plant Engineering provides a one stop resource that covers advanced renewable energy conversion and power plant engineering offering a practical applications oriented approach The book begins by introducing renewable energy basic thermodynamics energy conversion and power plants This is followed by in depth chapters that cover a specific renewable energy source and their conversion and power plant integration including bioenergy geothermal hydroelectric ocean energy solar photovoltaics solar thermal and wind Finally energy storage technologies are considered Throughout the book chapters are supported by modeling performance analysis and case studies It will support anyone with an interest in renewable energy energy conversion technologies and power plant engineering including advanced students researchers faculty scientists engineers R D industry personnel and policymakers Combines renewable energy conversion technologies and power plant engineering in one place Covers all renewable energy sources including solar wind bioenergy geothermal hydro and more Provides guidance on suitable power plants for each renewable energy source

Hydropower bioenergy and geothermal energy are mature technologies that contribute about 5-6% to primary energy supply. Solar, wind, and other new renewables have experienced rapid technology development but as yet they represent only a small share. This work examines policies and measures that have been introduced in IEA countries to increase the cost-effective deployment of renewables, reviews the objectives behind these policies, and evaluates the results. The aim is to identify best practices in order to assist governments in making future policy decisions.

Introduction to Advanced Renewable Energy Systems S. C. Bhatia, 2014. Annotation: Renewable energy is a natural energy which does not have a limited supply. Renewable energy can be used again and again and will never run out. Renewable energy is derived from natural processes that are replenished constantly. In its various forms, it derives directly from the sun or from heat generated deep within the earth. Included in the definition is electricity and heat generated from solar, wind, ocean, hydropower, biomass, geothermal resources, and biofuels and hydrogen derived from renewable resources. The book is a complete treatise on renewable energy sources and also includes issues relating to biofuels. It aims to serve as a text for the undergraduate and postgraduate students in relevant disciplines and a reference for all the professionals in related fields.

AI and IOT in Renewable Energy Rabindra Nath Shaw, Nishad Mendis, Saad Mekhilef, Ankush Ghosh, 2021-05-12. This book presents the latest research on applications of artificial intelligence and the Internet of Things in renewable energy systems. Advanced renewable energy systems must necessarily involve the latest technology like artificial intelligence and Internet of Things to develop low-cost, smart, and efficient solutions. Intelligence allows the system to optimize the power, thereby making it a power-efficient system, whereas Internet of Things makes the system independent of wire and flexible in operation. As a result, intelligent and IOT paradigms are finding increasing applications in the study of renewable energy systems. This book presents advanced applications of artificial intelligence and the Internet of Things in renewable energy systems development. It covers such topics as solar energy systems, electric vehicles, etc. In all these areas, applications of artificial intelligence methods such as artificial neural networks, genetic algorithms, fuzzy logic, and a combination of the above, called hybrid systems, are included. The book is intended for a wide audience ranging from the undergraduate level up to the research academic and industrial communities engaged in the study and performance prediction of renewable energy systems.
