Structure Of The Polymer Amorphous State:

Structure of the Polymer Amorphous State Kozlov, Gennady Zaikov, 2004-02-01 The basic problem of polymer physics is obtaining a structure properties correlations for their future application for practical purposes However these cannot be obtained without the development of a quantitative model of the polymer structure This problem has been actively investigated during the last 45 years

Order in the Amorphous "State" of Polymers Steven E. Keinath, Robert L. Miller, James K. Rieke, 2012-12-06 In 1975 a symposium was held in Midland Michigan co sponsored by the Dow Chemical Company and the then Midland Macromolecular Institute in honor of Raymond F Boyer on the occasion of his 65th birthday and retirement from Dow The topic of that first Boyer symposium dealt with an area of interest to Boyer namely polymer transitions and relaxations One decade later after ten years of additional fruitful scientific endeavor at MMI Ray Boyer was again honored with a symposium this time celebrating his 75th birthday and 10th anniversary at the Michigan Molecular Institute The topic of the second Boyer symposium in 1985 was somewhat more focused this time concentrating on the subject of order or structure in the amorphous state of polymers and the attendant polymer transitions that are observed This volume contains the full manuscripts of the contributors to the 17th MMI International Symposium held in Midland Michigan on August 18 21 1985 Eleven one hour plenary lectures and ten 20 minute contributed papers were presented during the Symposium An open forum panel discussion was also scheduled the edited transcript of that session is included at the end of this volume One of our tasks in organizing this Symposium was to attempt to gather together a number of speakers who would be able to define what if any physical structure might be present in amorphous polymers and what the nature of this order might be

Physical Structure of the Amorphous State Geoffrey Allen, Sarah Elaine B. Petrie, 1977

Structure of the Polymer Amorphous State Kozlov, Gennady Zaikov, 2004-02-01 The basic problem of polymer physics is obtaining structure properties correlations for their future application for practical purposes However these cannot be obtained without the development of a quantitative model of the polymer structure This problem has been actively investigated during the last 45 years which resulted in obtaining a great amount of experimental mostly indirect proofs of existence of the local order in the polymer amorphous state Now the time has come for creating a structural model of polymer basing based on the local order ideas The cluster model as presented in this monograph of the polymer amorphous state structure represents the realization of such attempts The development of this cluster model is based on well known experimental observation the behavior of glassy polymers in the area of stimulated high elasticity plateau is described in the framework of rubber elasticity concepts This gives an opportunity to present the local order cluster zone as a multifunctional entanglement of the physical network consisting of several collinear closely packed segments of different macromolecules the amorphous analogue of crystallite with extended chains and surrounded by a packless matrix An independent method for assessing local order zone fraction in the structure has been elaborated Segment length in the cluster equals the length of the chain statistical segment

that gives a correlation between molecular and structural parameters of the polymer Application of the cluster model allowed description and obtaining of analytical structure properties correlations for many processes proceeding in polymers elasticity yielding degradation transport some thermodynamic processes structural relaxation plasticization structural stabilization at thermo oxidative degradation etc The relation between the cluster model and some modern physical concepts for instance fractal analysis fluctuation free volume kinetic theory percolation theory irreversible colloidal aggregation models are outlined A separate chapter is devoted to the features of formation and control of the relative part of local order zones in non crystalline domains of semi crystalline polymers and their connection to the structure of crystallites

Fractal Mechanics of Polymers G. V. Kozlov, Yu G. Yanovskii, 2014-11-12 This new book explores the consideration of relationships that connect the structural and basic mechanical properties of polymeric mediums within the frameworks of fractal analysis with cluster model representations attraction Incidentally the choice of any structural model of medium or their combinations is defined by expediency and further usag
