The Labor Force In Economic Development:

The Labor Force in Economic Development John Dana Durand, 2015-03-08 This book explores growth and structural change in the labor force that accompany economic development. It reports on labor force characteristics in one hundred countries around the world, a project of the Population Studies Center at the University of Pennsylvania. Based on a world wide compilation of labor force and population statistics of censuses taken during 1946-1966, it presents previously inaccessible data on sex and age patterns of participation in economic activities, the size of the labor force in proportion to population, and changes in these areas associated with economic development. Patterns related to the level and speed of development, the structure of employment, urbanization, and age structure of population are defined. Conclusions are offered with regard to changing participation by women, young people, and the elderly. Originally published in 1976, The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Labor Force Policies for Regional Economic Development Stephen F. Seninger, 1989-09-21 This book identifies and examines the analytical connections between regional growth and development processes on the one hand and the region's labor force characteristics and qualities on the other. The applied policy focus of the discussion places the role of labor resources in the context of labor market institutions, theories of regional change, and a region's economic development path rather than treating labor as one of several quantifiable economic inputs in a growth equation.

The U-shaped Female Labor Force Function in Economic Development and Economic History Claudia Dale Goldin, 1994 The labor force participation rate of married women first declines and then rises as countries develop. Its shape is revealed both across the process of economic development and through the histories of currently advanced countries. The initial decline in the participation rate is due to the movement of production from the household, family farm, and small business to the wider market and to a strong income effect. But the income effect weakens and the substitution effect strengthens at some point. This paper explores why the change takes place and why the shape is traced out. When women are poorly educated, their only wage labor outside the home and family is in manual work against which a strong social stigma exists. But when women are educated, particularly at the secondary level, they enter white collar work.

against which no social stigma exists Data for more than one hundred countries and for United States history are used to explore the hypothesis of the shaped female labor force function **Women's Changing Participation in the Labor Force** T. Paul Schultz, 1989 Research has rarely tested the proposition that women have lost more than men when low income countries introduce minimum wage legislation and certain other labor market regulations that raise the cost of labor to firms compared with families But such interventions in the labor market may slow women's transition from nonmarket and family work to employment by firms And that may affect the rate and structure of economic growth **Economic Development and Female Participation in the Labor Force** Saad Hassan Barghout, 1970 *Recent U.S. Labor Force Dynamics* Mr. Ravi Balakrishnan, Mai Dao, Mr. Juan Sole, Jeremy Zook, 2015-04-02 The U S labor force participation rate LFPR fell dramatically following the Great Recession and has yet to start recovering A key question is how much of the post 2007 decline is reversible something which is central to the policy debate The key finding of this paper is that while around 1/4 of the post 2007 decline is reversible the LFPR will continue to decline given population aging This paper's measure of the employment gap also suggests that labor market slack remains and will only decline gradually pointing to a still important role for stimulative macro economic policies to help reach full employment In addition given the continued downward pressure on the LFPR labor supply measures will be an essential component of the strategy to boost potential growth Finally stimulative macroeconomic and labor supply policies should also help reduce the scope for further hysteresis effects to develop e.g. loss of skills discouragement **The Labor Force: Migration, Earnings, & Growth**, 1973 While much has been written on migration and economic growth a longitudinal data source has become generally available to researchers only in recent years The Social Security Administration and the Tennessee Valley Authority jointly sponsored the symposium reported in these proceedings in an attempt to bring together researchers and others interested in using the Social Security Administration's Continuous Work History Sample CWHS in socioeconomic analysis The papers in this proceedings represent the first attempt to formalize and publish the most recent research results based on the CWHS and other data covering a rather broad spectrum of subjects **Population and Labor Force Resources as Factors in Economic Development** Philip M.
