Malozemoff, 2012-12-06 This volume contains the proceedings of the 5th Japan International Symposium on Strong Correlation and Superconductivity which was held in Keidanren Guest House at the foot of Mt Fuji May 21-25 1989 The purpose of the Symposium was to provide an opportunity for discussions on the problem of strong correlation of electrons in the context of high  $T_c$  superconductivity Sixty-eight scientists were invited from seven countries and forty-three papers were presented in the Symposium Soon after the discovery of high  $T_c$  superconducting oxides Professor P. W. Anderson proposed that the essence of high  $T_c$  superconductivity lies in the strong correlation among the electrons in these materials This proposal has stimulated a wide range of theoretical investigations on this profound and difficult problem which are expected to lead eventually to new concepts describing strong electron correlation In the Symposium Anderson himself started lively discussions by his talk entitled Myth and Reality in High  $T_c$  Superconductivity which was followed by various reports on theoretical studies and experimental results Concise and thoughtful summaries of experiment and theory were given by Professors H. R. Ott and P. A. Lee respectively It is our hope that this volume reflects the present status of the research activity on this outstanding problem from the viewpoint of the basic physics and that it will further stimulate the effort to understand these fascinating systems the high  $T_c$  oxides

**Theoretical Study of Electron Correlation Driven Superconductivity in Systems with Coexisting Wide and Narrow Bands** Daisuke Ogura, 2019-10-23 This book deals with the study of superconductivity in systems with coexisting wide and narrow bands It has been previously suggested that superconductivity can be enhanced in systems with coexisting wide and narrow bands when the Fermi level is near the narrow band edge In this book the authors study two problems concerning this mechanism in order to provide a systematic understanding of the role of strong electron correlation effects and propose a realistic candidate material which meets the ideal criteria for high  $T_c$  superconductivity Regarding the role of strong correlation effects the FLEX DMFT method is adopted Based on systematic calculations the pairing mechanism is found to be indeed valid even when the strong correlation effect is considered within the formalism In the second half of the book the authors propose a feasible candidate material by introducing the concept of the hidden ladder electronic structure arising from the combination of the bilayer lattice structure and the anisotropic orbitals of the electrons As such the book contributes a valuable theoretical guiding principle for seeking unknown high  $T_c$  superconductors
