Structural Timber Design:

Structural Timber Design, EBundle Werner Seim, 2024-03-06 Timber construction has been one of the most innovative areas of the building industry for several years. The speed with which new products are introduced into practical application is almost breathtaking compared to the other construction materials in the building industry. As a result, timber construction is continuously increasing its market share in commercial buildings and hall structures and even in multi-storey construction for residential and office buildings. This book provides essential knowledge and skills required for the design, detailing and construction of timber structures for typical building structures. Special emphasis is placed on the specific features of timber and wood-based materials compared to other construction materials. This concerns the numerous advantages, such as the comparatively low weight, the good workability of the high performance material and the large variety of assembling technologies, but also the challenges resulting from the material anisotropy and from the susceptibility to natural pests. In each chapter, the essential phenomena are explained first and then brought into connection with code regulations. This aims to support the basic understanding of the interrelations and dependencies in timber engineering, which is the fundamental basis of creative engineering. Package Print Book ePDF

Structural Timber Design to Eurocode 5 Jack Porteous, Abdy Kermani, 2008-05-23 *Structural Timber Design to Eurocode 5* is a comprehensive book which provides practising engineers and specialist contractors with detailed information and in-depth guidance on the design of timber structures based on the common rules and rules for buildings in Eurocode 5 Part 1-1. It will also be of interest to undergraduate and postgraduate students of civil and structural engineering. The book provides a step-by-step approach to the design of all of the most commonly used timber elements and connections using solid timber, glued laminated timber or wood-based structural products. It features numerous detailed worked examples and incorporates the requirements of the UK National Annex. It covers the strength and stiffness properties of timber and its reconstituted and engineered products, the key requirements of Eurocode 0, Eurocode 1 and Eurocode 5 Part 1-1, the design of beams and columns of solid timber, glued laminated composite and thin webbed sections, the lateral stability requirements of timber structures and the design of mechanical connections subjected to lateral and/or axial forces, as well as rigid and semi-rigid connections subjected to a moment. The Authors: Jack Porteous is a consulting engineer specialising in timber engineering. He is a Chartered Engineer, Fellow of the Institution of Civil Engineers and Member of the Institution of Structural Engineers. He is a visiting scholar and lecturer in timber engineering at Napier University. Abdy Kermani is the Professor of Timber Engineering and R D consultant at Napier University. He is a Chartered Engineer, Member of the Institution of Structural Engineers and Fellow of the Institute of Wood Science with over 20 years experience in civil and structural engineering research, teaching and practice. The authors have led several research and development programmes on the structural use of timber and its reconstituted products. Their research work in timber engineering is internationally recognised and published widely. Also of Interest: Timber Designers

Timber Connections Rohana Hassan,Azmi Ibrahim,Zakiah Ahmad,2023-04-19 This book describes the application of mathematical and fundamental theory as stated in the relevant standards namely EYM and NDS Timber is one of the important building materials in the field of engineering other than concrete and steel However there is still a lot of unexplored knowledge about timber including how timber connections are made One of the main types of timber connection is mortise and tenon Mortise and tenon are widely seen as one of the most important traditional timber structural joint In order to understand the load carrying capacity and performance of the structural mortise and tenon joint the existing theoretical background of timber joint design is made as a reference Current equations applicable in estimating the load carrying capacity of timber joint uses the European Yield Model EYM Therefore the main aim of this book is to share the basic design knowledge inclusive of safety factor limitations as engineering main factor in structural design
