illustrative examples of model based software engineering from semantic model all the way to executable code Explains how to derive verification acceptance test cases from a semantic model Describes project estimation along with alternative software development and maintenance processes Shows how to develop and maintain cost effective software that solves real world problems Written for graduate and undergraduate students in software engineering and professionals in the field How to Engineer Software offers an introduction to applying the theory of computing with practice and judgment in order to economically develop and maintain software

Structured Development for Real-Time Systems Paul T. Ward,1986-06-04 Real time and embedded systems are in widespread use in the modern world From the microprocessor controller in a camera through smart traffic lights and production control systems to large defense systems computer technology is increasingly a part of systems that control and respond to their environments in real time As the technology has improved we have come to rely on these systems more and more we have even put our lives in their hands Airplanes biomedical accelerators nuclear power plants and the like all depend on real time control to operate safely A failure in a control system such as not responding correctly to faults in the environment could endanger many lives Unfortunately there is a tendency for developers to focus too heavily on the intricacies of the engineering and computer technology to the detriment of understanding the real world problem at hand At best this wastes time and resources and at worst it is dangerous in light of the life critical nature of today's systems This misplaced focus can result at least partly from the lack of a comprehensive set of modeling tools and techniques fitted to the real time development environment This book provides the tools and techniques needed for visualizing and verifying the

operation of a real time system prior to construction and demonstrates their usefulness Embedded Real-Time Systems
