Sustainable Development offers a unified transdisciplinary approach for transforming the industrial state in order to promote sustainable development. The authors present a deep analysis of the ways that industrial states both developed and developing are currently unsustainable and how economic and social welfare are related to the environment, to public health and safety, and to earning capacity and meaningful and rewarding employment. The authors offer multipurpose solutions to the sustainability challenge that integrate industrial development, employment, technology, environment, national and international law, trade, finance, and public and worker health and safety. The authors present a compelling wake up call that warns of the collision course set between the current paths of continued growth and inevitable unsustainability in the world today. Offering clear examples and real solutions, this textbook illustrates how the driving forces that are currently promoting unsustainability can be refocused and redesigned to reverse course and improve the state of the world. This book is essential reading for those teaching and studying sustainable development and the critical roles of the economy, employment, and the environment.

Modular Product Architecture - Fostering Or Hindering Innovation? Peter Klemmer, 2007-11 Seminar paper from the year 2007 in the subject Business economics Supply Production Logistics grade 2.0 LMU Munich Innotec Institut für Innovationsforschung

Technologiemanagement und Entrepreneurship course Innovationsmanagement Theorie Empirie Case Studies 34 entries in the bibliography language English abstract

Industrialization processes in the last decades have resulted in the emergence of immense new industries which for a great part can be ascribed to comprehensive activities of technological innovation. Driven by dynamic market contexts such as globalization or technological advances leading to growing complexities and evolving consumer demands, firms are however increasingly confronted with the challenge to offer a greater variety of products of improved performance in less time and under lower costs. Momme et al 2000 p 128 Ulrich Eppinger 1995 p 5

Technological innovation as the means and ends of new product development therefore plays a significant role. Modular product architecture with products that made up of a set of independent components connected only via defined interfaces Ulrich Eppinger 1995 p 132 is predominantly found in technologically intensive industries such as telecommunications, electronics or the automobile sector. Sanchez Mahoney 1996 p 67 Staudenmayer et al 2005 p 308

Under the light of the challenges confronting firms, this paper examines the effects modular product architecture has on technological innovation. This paper investigates the effects of modular product architecture with standardized open interfaces assuming many component producers and a central firm controlling the systemic fit of these. From a resource and production point of view, modularity in combination with a coherent process infrastructure enables firms to meet market demands described Sanchez 2004 p 59. In addition, product strategic flexibility is significantly improved involving the possibilities of mass customization.
