Internetworking with TCP/IP. Douglas Comer, David L. Stevens, 2001. Internetworking with TCP/IP Volume III describes the fundamental concepts of client server computing used to build all distributed computing systems and presents an in depth guide to the Posix sockets standard utilized by Linux and other operating systems. Dr Douglas E. Comer compares leading server designs and describes the key tools and techniques used to build clients and servers including Remote Procedure Call (RPC). The book contains examples of running programs that illustrate each approach. Comer introduces the client server model and its software design implications the role of concurrent processing and threads the Socket API and differences that impact Linux programmers. Understand the key algorithms and issues associated with client and server software design then review three leading approaches: iterative connectionless servers UDP and both iterative and concurrent connection oriented servers TCP. The book contains extensive coverage of threading including a new chapter on using threads for concurrency as well as coverage of single threaded and multi threaded concurrent servers. Comer introduces multi protocol and multi service services reviews client concurrency tunneling at the transport and application levels and external data representation XDR. He reviews RPC distributed program generation NFS concepts and protocol Telnet streaming media transport and finally techniques for avoiding deadlock and starvation in client server systems. For everyone who wants to master TCP/IP and understand how the Internet works.

Internetworking with TCP/IP: Principles, protocols, and architecture Douglas Comer, 2006. This best selling conceptual introduction to TCP/IP internetworking protocols interweaves a clear discussion of fundamentals with the latest technologies. Leading author Doug Comer covers layering and shows how all protocols in the TCP/IP suite fit into the five layer model. With a new focus on CIDR addressing this revision addresses MPLS and IP switching technology traffic scheduling VOIP Explicit Congestion Notification ECN and Selective ACKnowledgement SACK. Includes coverage of Voice and Video Over IP RTP IP coverage a discussion of routing architectures examination of Internet application services such as domain name system DNS electronic mail SMTP MIME file transfer and access FTP TFTP NFS remote login TELNET rlogin and network management SNMP MIB ANS I a description of mobile IP and private network interconnections such as NAT and VPN. NetWare TCP/IP Karanjit S. Siyan, Karanjit Siyan, 1996 Internetworking with NetWare TCP IP is a complete handbook and reference for implementing NetWare TCP IP on the user's network with other NetWare and Microsoft products. This book provides users with a thorough background of TCP IP technology. They will gain a complete understanding of the NetWare services that operate in the TCP IP environment.

TCP/IP Architecture, Design, and Implementation in Linux Sameer Seth, M. Ajaykumar Venkatesulu, 2009-01-23 This book provides thorough knowledge of Linux TCP IP stack and kernel framework for its network stack including complete knowledge of design and implementation. Starting with simple client server socket programs and progressing to complex design and implementation of TCP IP protocol in Linux, this book provides different aspects of socket programming and major TCP IP related algorithms. In addition, the text features netfilter hook framework, a complete explanation of routing subsystem, IP QoS implementation, and Network Soft IRQ. This book further contains elements on TCP state machine implementation, TCP timer implementation on Linux, TCP memory management on Linux, and debugging TCP IP stack using lcrash.

Internetworking with TCP/IP. Douglas E. Comer, David L. Stevens, 1996 Software design is used as the central theme to answer the question: How does application software use TCP IP? Only limited networking background is needed because the text concentrates on how to use an internet. The client server paradigm is presented by using standard protocols to illustrate algorithms, designs, and implementation techniques such as gateway and tunnelling. The authors have incorporated the latest standards by rewriting the extensive code in ANSI C and discussing changes in protocols. New sections explain concepts such as the slirp application gateway program that provides Internet access across a dial up connection, and new material is included on deadlock and livelock. All software, including the new code in ANSI C, is available by FTP.
