Software Process Modeling Watts S. Humphrey, 1989 Abstract A defined software process is needed to provide organizations with a consistent framework for performing their work and improving the way they do it An overall framework for modeling simplifies the task of producing process models permits them to be tailored to individual needs and facilitates process evolution This paper outlines the principles of entity process models and suggests ways in which they can help to address some of the problems with more conventional approaches to modeling software processes

Process Modeling, 1989 Software Process Modeling Example Marc I. Kellner, Carnegie-Mellon University, Software Engineering Institute, 1989 A Software Process Model Handbook for Incorporating People's Capabilities Silvia T. Acuna, Natalia Juristo, Ana Maria Moreno, Alicia Mon, 2006-06-03 A Software Process Model Handbook for Incorporating People's Capabilities offers the most advanced approach to date empirically validated at software development organizations. This handbook adds a valuable contribution to the much needed literature on people related aspects in software engineering. The primary focus is on the particular challenge of extending software process definitions to more explicitly address people related considerations. The capability concept is not present nor has it been considered in most software process models. The authors have developed a capabilities oriented software process model which has been formalized in UML and implemented as a tool. A Software Process Model Handbook for Incorporating People's Capabilities guides readers through the incorporation of the individual's capabilities into the software process. Structured to meet the needs of research scientists and graduate level students in computer science and engineering, this book is also suitable for practitioners in industry.

Supporting Software Processes Through Software Process Modeling Marc I. Kellner, Carnegie-Mellon University, Software Engineering Institute, 1990 A Paradigm for Decentralized Process Modeling I. Ben-Shaul, Gail E. Kaiser, 2012-12-06 A Paradigm for Decentralized Process Modeling presents a novel approach to decentralized process modeling that combines both trends and suggests a paradigm for decentralized PCEs supporting concerted efforts among geographically dispersed teams each local individual or team with its own autonomous process with emphasis on flexible control over the degree of collaboration versus autonomy provided. A key guideline in this approach is to supply abstraction mechanisms whereby pre-existing processes or workflows can be encapsulated and retain security of their internal artifacts and status data while agreeing with other processes on formal interfaces through which all their interactions are conducted on intentionally shared information. This book is primarily intended to provide an in depth discussion of decentralized process modeling and enactment technology covering both high level concepts and a full blown realization of these concepts in a concrete system. Either the whole book or selected chapters could be used in a graduate course on software engineering software process or software development environments or even for a course on workflow systems outside computer science e.g. in a classical engineering department for engineering design or in a business school for business practices or enterprise wide management or in the medical informatics department of a health science institution concerned with computer assistance for managed care. Selected portions of the book such as section 2.2 on Marvel could also be employed as a case study in advanced undergraduate software engineering courses. A Paradigm for Decentralized Process Modeling is a valuable resource for both researchers and practitioners particularly in software engineering software development environments and software process and workflow management but also in electrical mechanical civil and other areas of engineering which have analogous needs for design processes environmental support and concurrent engineering and beyond to private and public

sector workflow management and control groupware support and heterogeneous distributed systems in general

New Modeling Concepts for Today's Software Processes Jürgen Münch, Ye Yang, Wilhelm Schäfer, 2010-06-20 2010 was the first time that the International Conference on Software Process was held autonomously and not co located with a larger conference This was a special challenge and we are glad that the conference gained a lot of attention a significant number of contributions and many highly interested participants from industry and academia This volume contains the papers presented at ICSP 2010 held in Paderborn G many during July 8 9 2010 ICSP 2010 was the fourth conference of the ICSP series The conference provided a forum for researchers and industrial practitioners to change new research results experiences and findings in the area of software and system process modeling and management The increasing distribution of development activities new development paradigms such as cloud computing new classes of systems such as cyber physical systems and short technology cycles are currently driving forces for the software domain They require appropriate answers with respect to process models and management suitable modeling concepts and an understanding of the effects of the processes in specific environments and domains Many papers in the proceedings address these issues
