Grid Resource Management Jarek Nabrzyski, Jennifer M. Schopf, Jan Weglarz, 2012-12-06 Grid Resource Management State of the Art and Future Trends presents an overview of the state of the field and describes both the real experiences and the current research available today Grid computing is a rapidly developing and changing field involving the shared and coordinated use of dynamic multi institutional resources Grid resource management is the process of identifying requirements matching resources to applications allocating those resources and scheduling and monitoring Grid resources over time in order to run Grid applications as efficiently as possible While Grids have become almost commonplace the use of good Grid resource management tools is far from ubiquitous because of the many open issues of the field including the multiple layers of schedulers the lack of control over resources the fact that resources are shared and that users and administrators have conflicting performance goals

Microsoft Windows XP Professional Resource Kit Microsoft Windows Team, 2003 In this book you will get comprehensive guidance straight from the Microsoft Windows team Topics covered are plan test and automate your deployment centrally manage users and network resources with Group Policy and IntelliMirror technologies exploit enhancements in disk file system and device management capabilities manage authentication authorization access control and EFS connect clients to Windows based networks configure TCP IP IP addressing and name resolution services implement Remote Desktop remote access and mobile users support features and much more back cover
