factors affecting maize and cowpea varietal turnover and quality seed use: Mixed-method evidence from northern Nigeria
Ragasa, Catherine,Umar, Sulaiman,Sani, Rabiuh Mohammed,Onyibe, Johnson E.,Omoigui, Lucky,Fasoranti, Adetunji,Nwagboso, Chibuso,Bamiwuye, Temilolu,Takeshima, Hiroyuki,Andam, Kwaw S.,2024-12-10 This study provides an integrated assessment of the seed system for maize and cowpea two of the most important crops in Nigeria We analyze the various factors influencing seed supply and demand and present different measures of capacity and incentive of multiple actors along the seed value chain We also present metrics on adoption of improved varieties and quality seed use given the complexity of these concepts and persistent challenges in measuring them in a survey context At the national level the 2015 to 2018 Living Standards Measurement Survey data show that the adoption rate of improved varieties was 16 percent of maize area and 6 percent of cowpea area with 9 percent of maize farmers and 3 percent of cowpea farmers reporting certified seed use of improved varieties Data from household surveys conducted in 2022 show that in Bauchi and Kaduna states with relatively high maize and cowpea production levels the adoption rate of quality seeds of improved varieties was 10 percent of cowpea land area and 25 percent of maize land area In addition the improved varieties in the cowpea and maize plots were old the area weighted varietal age in cowpea farms was 12 years and in maize farms 13 years The most popular cowpea variety was Kananado likely matching released variety SAMPEA 9 or SAMPEA 11 released in 2005 and 2009 respectively and the most popular maize variety was SAMMAZ 15 released in 2008 Newer varieties have not caught up in popularity Different stages of the seed value chain face major bottlenecks Two major themes emerged as barriers and drivers of adoption of newer improved varieties and quality seed 1 Seed supplies were limited especially breeder and foundation seeds implying that Nigeria s seed system needs to increase coordination funding and capacity for early generation seed production and management and 2 new varieties were not promoted to farmers who therefore lacked exposure to the seeds implying that both public and private sectors need to invest more in the promotion of these varieties and increase exposure and testing among farmers There is also a need to look at the breeding and offerings of newer improved varieties Some newer varieties do not consistently and comprehensively outperform older bred varieties in field trials and farm demonstrations some older bred varieties remain attractive and popular to farmers Beyond seeds several contextual factors disabled farmers and seed actors capacity and incentive to expand production and adopt improved varieties Security issues poor soil conditions and high fertilizer transportation irrigation and diesel costs were some of the major disablers in the seed system that must be addressed

extremely dynamically in the last decade One of the reasons is the impressive progress in 3D graphics and the increasing accessibility of hardware with sufficient computational power to smoothly render high quality 3D environments Virtual reality overwhelms the user by replacing the physical world with a computer generated 3D scenario Its power lies in embodied complex and vivid scenarios rich in context and dynamic engagement of the sensorimotor system which provokes more naturalistic behavioural and physiological responses than abstract stimuli Congruent multisensory stimulation builds virtual experience and makes us forget about the real world Strong presence and embodiment illusions can cause deep cognitive affective and behavioural changes leading to enhanced learning perspective taking and treatments Some types of sensory input have received much more attention than others This includes mainly visual and auditory cues but also to some extent nociception and touch However the human sensory system is much richer and more complex and includes many other senses such as smell and taste but also thermoception interoception equilibrioception and others Most VR experiences are built on rich audiovisual cues since these two modalities allow us to perceive the virtual world and interact with it For example touch although extremely important is often represented in a reductionist form and other modalities such as the sense of smell or thermoception are completely ignored
