Advanced Information Processing Techniques for LAN and MAN Management Jean Pierre Claudé, 1994 Although networks are widespread today their management remains difficult because of the complex heterogeneity of the environment LAN MAN multi manufacturer multi media multi domain A variety of computational techniques are required and different points of view must be taken into account to achieve a complete network management system Firstly management information must be extracted from network components and manipulated by the integrator proxy agent Secondly management data must be maintained in the Management Information Base and distributed to the various management applications Thirdly management applications must be provided for diverse objectives including the functional objective performance configuration accounting fault security the responsibility objective network element network services business management the organizational objective server resources management and the domain objective public private A variety of tools expert systems blackboard man machine interface must be designed to optimize the system responses Fourthly these points of view must be integrated in a global and distributed environment This publication examines the benefits of advanced information processing techniques for different local network management problems and considers the current academic and industrial research being carried out It provides a good overview of the area for specialists students and the network using public and aims to stimulate further progress in the designing of local network management

Web-Based Management of IP Networks and Systems Jean-Philippe Martin-Flatin, 2003 Building on the author's extensive experience in industry and government agencies this book proposes a general framework for integrating the management of networked systems in the IP world The Web based Integrated Management Architecture WIMA leverages XML's self description capability to integrate SNMP data and CIM objects in a seamless manner The first part of the book begins with a detailed analysis of SNMP it highlights its strengths and weaknesses and justifies the need for object oriented information models such as CIM Next the author summarizes the different paradigms considered in management research and industry in the past decade compares the suitability of different middleware solutions and concludes that with current technologies Web based management makes a lot of technical sense and is not just trendy The second part goes into software engineering detail and discusses tradeoffs for organizing manager to agent communication In

WIMA agents publish the monitoring data and notifications they can send and management applications managers subscribe to them in a semi or fully automated way The same publish subscribe paradigm is used for manager to manager communication when managers are organized hierarchically to manage a large domain or different domains We explain why this solution decreases network overhead and improves scalability Security issues are also investigated The third part of the book presents the high level design of JAMAP a research prototype that implements the main components of the WIMA architecture Its code is freely available and released under the GPL license This prototype is currently being ported to Web Services Finally the author compares WIMA with SNMP WBEM CIM and JMX and concludes that WBEM could evolve into WIMA in the future This book is primarily aimed at software architects and engineers who design and write management applications It should also be of interest to administrators and people who are versed into management architectures
