**Yarn Texturing Technology** J. W. S. Hearle, L. Hollick, D. K. Wilson, 2001-10-09 Texturing is increasingly important in textile production not only in yarns for weaving and knitting fashion products but also for carpets furnishing fabrics and a variety of technical textiles This book covers all the major techniques including twist texturing jet screen texturing false twist process BCF processes and air jet texturing in detail Combining a comprehensive review of the physics and chemistry of texturing with a thorough illustrated description of current practice this book is invaluable for yarn and fabric manufacturers textile scientists and students on textile science and technology courses

**Synthetic Filament Yarn** Ali Demir, Hassan M. Behery, 1997 *Advances in Yarn Spinning Technology* C. A. Lawrence, 2010-09-27 This book provides an invaluable single source of information on the advances in yarn spinning technologies Advanced spinning systems are described and comparisons are made of the properties of the yarns produced and resultant finished products with those from conventional systems Part one provides an introduction to yarn fibre spinning and structure Chapters discuss the principles of ring spinning and open end spinning of yarns Yarn structure and properties from different spinning techniques and yarn structural requirements for knitted and woven fabrics are also examined Part two covers advances in particular yarn spinning technologies Topics range from siro spinning to compact spinning technology and air jet spinning Final chapters explore how to minimise fibre damage which occur during spinning and the use of spin finishes for textiles With its distinguished editor and array of international contributors *Advances in yarn spinning technology* is an important text for spinners yarn manufacturers and fabric producers as well as researchers technicians engineers and technologists in this sector of the textile industry Documents advances in spinning technologies and presents comparisons between systems Assesses particular textile spinning technologies with specific chapters focusing on siro compact rotor friction and air jet spinning Reviews measures to minimise fibre damage caused by spinning are investigated with specific relevance to rotor and friction spinning

**Textured Yarn Technology: Production, properties, and processing** Monsanto Company. Textiles Division, 1967 *False Twist Textured Yarns* C. Atkinson, 2012-03-15 A false twist textured yarn is a continuous filament yarn that has been processed to introduce crimps coils loops and other fine distortions along the yarn's length These distortions give synthetic yarns such as nylon polyester and polypropylene improved properties such as stretch bulk improved thermal insulation and an appearance similar to natural fibres This important book summarises the key principles technologies and process issues in the manufacture of high quality false twist textured yarns After an introductory chapter on the development of textured yarns the book reviews yarn texturing machine designs and twist application methods including air jet mingling and machine variants for draw textured speciality yarns It also reviews common process performance and quality problems and how they can be resolved as well process control quality assurance and costs The final chapters look at applications of false twist textured nylon polyester and polypropylene yarns as well as the future of false twist texturing

Based on the author's extensive experience in the textile industry *False twist textured yarns* is a standard reference on the key technologies and process issues involved in the manufacture of high quality false twist textured yarns. Discusses the development of textured yarns, the basic principles of texturing and the process of false twist texturing. Summarises the key principles, technologies and process issues in the manufacture of high quality false twist textured yarns. Chapters include texturing machine design, applications of textured yarns and the future opportunities for false twist texturing. **Textile Technology Digest**, 2002 **Handbook of Fibre Rope Technology** H A McKenna, J. W. S. Hearle, N O'Hear, 2004-04-22

Annotation: Fibre rope has undergone dramatic technological changes over the last few decades with such advances as the development of synthetic fibres and modern types of rope construction. This major handbook takes a comprehensive look at rope making materials and structures, properties and mechanics. It covers rope production focusing on laid strand braided, low twist and parallel yarn ropes and rope terminations. Rope testing is examined in depth as well as the key issues surrounding rope retirement. Case studies from a variety of environments are studied. This is an essential reference for everyone involved in the design, selection, use, inspection and testing of fibre rope. **CONTENTS**: Introduction to fibre ropes, Rope making materials, Rope structures, Properties of rope, Rope mechanics, Rope production, Terminations, Use of rope, Inspection and retirement, Testing, Consumption markets and liability, Case studies. *Written Comments on Certain Tariff and Trade Bills*, 1985 Miscellaneous Tariff and Trade Bills United States. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured, predominantly using aqueous dyeing processes, the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico-chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. *Physico-Chemical Aspects of Textile Coloration* provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural, man-made and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing, dyeing as an area of study as well as the terminology employed in dyeing technology and science, contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level, fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption, detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres, polyester, polyamide, wool, polyacrylonitrile and silk fibres, non-aqueous dyeing as represented by the use of air-organic

solvents and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration **New Technical Books** New York Public Library,1980 **Handbook of Fiber Science and Technology** Menachem Lewin,Stephen B.
