not only strengthens competitiveness but also has a positive impact on the efficiency of internal procedures. Therefore it does not surprise that an increasing number of companies use the potential of project management. In this context it is to be said that not every project is led to a successful end. Comp. figure 1: More than half of the projects are cancelled before reaching the project target. Only about 19% are completed successfully. Requirements for quality management as a part of projects gain relevance in this context. An integrated quality management that begins with quality issues within the target definition can help avoiding potential deficits in contents and thereby bring projects to a successful end. Thus an improvement of competitiveness only seems realizable by use of a quality assured project management. Due to a more and more homogenous range of services of the suppliers in the end customer market there are few distinguishing criteria. Customer satisfaction is an adequate measure and developing to be the most important influencing factor of competitiveness.
