Cansière,2017-08-19 For all the history buffs on warfare of the last century Tanks is a perfect choice packed with fascinating information San Francisco Book Review This Casemate Short History by the authors of Tanks in Hell A Marine Corps Tank Company on Tarawa provides an informative and entertaining introduction to this iconic weapon of the last hundred years Tanks first ventured into battle on the Somme in 1916 and by the end of the war countries were beginning to choose heavy or light tank designs to suit their preferred doctrine Design then stagnated until World War II brought about rapid change Tanks would prove integral to fighting in almost every theater the Germans swept across Europe using tanks to spearhead their blitzkrieg method of war until Soviet tanks proved more than their match and led to some epic tank battles on a huge scale After World War II tank designs became increasingly sophisticated and armor undertook a variety of roles in conflicts with mixed results American armor in Korea was soon forced into an infantry support role which it reprised in Vietnam while Soviet armor was defeated in guerrilla warfare in Afghanistan However tanks played a pivotal role in the American shock and awe doctrine in two wars in Iraq and tanks remain a crucial weapons system on the battlefield Comprehensive despite its conciseness For example it addresses the employment of tanks in lesser known conflicts such as the Indio Pakistani and Sino Vietnamese wars The book provides context for contemporary tank operations and offers a perspective on the way ahead Military Review [Tank Warfare, 1939-1945](#) Simon Forty,Jonathan Forty,2020-07-19 On the battlefields of Europe and North Africa during the Second World War tanks played a key role and the intense pressure of combat drove forward tank design and tactics at an extraordinary rate In a few years on all sides tank warfare was transformed This is the dramatic process that Simon and Jonathan Forty chronicle in this heavily illustrated history They describe the fundamentals of pre war tank design and compare the theories formulated in the 1930s as to how they should be used in battle Then they show how the harsh experience of the German blitzkrieg campaigns in Poland France and the Soviet Union compelled the Western Allies to reconsider their equipment organization and tactics and how the Germans responded to the Allied challenge The speed of progress is demonstrated in the selection of over 180 archive photographs which record as only photographs can the conditions of war on each battle front They also give a vivid impression of what armoured warfare was like for the tank crews of 75 years ago [The Tanks of the World Wars](#) Charles River Charles River Editors,2018-05-04 Includes pictures Includes accounts of the fighting Includes online resources and a bibliography for further reading One of the most important breakthroughs in military technology associated with World War I and certainly the one that continues to capture the public imagination was the introduction of a war machine that came to dominate the face of land battles throughout most of the 20th century the tank As a concept it was not revolutionary in fact it harkened back to classical antiquity and to the Middle Ages such as the covered battering rams and testudos which had made frequent appearances on ancient battlefields In essence it was designed to solve the age old problem of protecting infantry from enemy projectiles while remaining mobile The tanks of World War I revolutionary and initially terrifying as they were had their limitations A standard tank would

literally consume its own weight in spare parts and they were painfully slow compared to more modern iterations. They were also lightly armed usually with machine guns or light guns at most and some poorly designed models tended to ditch themselves sometimes irretrievably in wider trenches. However as a mobile bastion for infantry to shelter behind in the advance and as a psychological weapon they were significant. All major powers and many minor ones learned their lesson in World War I. During the interwar period late 1918 to mid 1939 a wide variety of tanks and antitank weapons were developed by a number of different countries and those nations that did not have their own models hastened to purchase some from the more advanced countries. These tanks would shape the war that was to come. World War II was thus the culmination of a quarter century of tank development and it would also be the first major test of tanks in mobile warfare during which they had to face other tanks. However many of the tanks were constructed with the static warfare of the Western Front in mind and were thus slow and had short operational ranges. Others were too light to face opposing tanks or the new generation of anti tank weapons that hadn't existed in World War I. The unsuitability of these tank models for this new kind of warfare was quickly recognized and the belligerent powers scrambled to create better designs. As each new improved model came off the assembly lines the opposing powers rushed to create a tank that could beat it. In that regard World War II was also a war between rival engineers. The beginning of World War II found the major powers developing tanks to some extent but lingering ideas from World War I affected the development of tanks during the Interwar period. As a result aside from the blitzkrieg doctrine developed by the Nazis tanks were still used in terms of infantry support and there were few wars during this period to give strategists the chance to develop better uses for the new armored vehicles before World War II started. Commanders soon found that many of the tanks fielded in the campaigns of 1939-1941 lacked the necessary armor, guns and designs. Inevitably tactics evolved throughout the war. The Germans were early leaders in tank tactics as their successes from Poland through the opening phases of Operation Barbarossa demonstrated. The main German tank tactic was the so called Schwerpunkt center of gravity in which a concentration of tanks achieved a local superiority, broke through and drove deep behind enemy lines, carving up frontline enemy forces that could then be surrounded and taken out by support tanks, infantry and artillery. This is why German tanks were built for speed while maintaining good armor and weaponry. Once the Allies witnessed the efficacy of German tank tactics they began to imitate them, prompting the Germans to further refine their own techniques.

**Anti Tank Warfare** Fouad Sabry, 2024-05-29. What is Anti Tank Warfare. Anti tank warfare originated during World War I from the desire to develop technology and tactics to destroy tanks. After the Allies deployed the first tanks in 1916 the German Empire introduced the first anti tank weapons. The first developed anti tank weapon was a scaled up bolt action rifle, the Mauser 1918 T Gewehr, that fired a 13.2 mm cartridge with a solid bullet that could penetrate the thin armor used by tanks at that time and destroy the engine or ricochet inside, killing occupants. Because tanks represent an enemy's strong force projection on land, military strategists have incorporated anti tank warfare into the doctrine of nearly every

combat service since The most predominant anti tank weapons at the start of World War II in 1939 included the tank mounted gun anti tank guns and anti tank grenades used by the infantry and ground attack aircraft How you will benefit I Insights and validations about the following topics Chapter 1 Anti tank warfare Chapter 2 Armoured fighting vehicle Chapter 3 Assault gun Chapter 4 Tank destroyer Chapter 5 Self propelled anti aircraft weapon Chapter 6 Infantry fighting vehicle Chapter 7 Rocket propelled grenade Chapter 8 Self propelled artillery Chapter 9 Field gun Chapter 10 BMP 1 II Answering the public top questions about anti tank warfare Who this book is for Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of Anti Tank Warfare

Gee,1998-02 **Tank Battles of the Cold War, 1948-1991** Anthony Tucker-Jones,2021-06-30 As Anthony Tucker Jones shows in this highly illustrated wide ranging history for most of the Cold War the tank retained its pre eminence on the battlefield The Arab Israeli wars witnessed some of the biggest tank battles of all time and tanks played key roles in conflicts in Korea Vietnam and Afghanistan as well as in the Iran Iraq War and the wars fought between India and Pakistan But then in the mid 1960s anti tank weapons became ever deadlier and the Mechanised Infantry Fighting Vehicle MIFV which was designed to support infantry and fight tanks emerged and the heyday of the tank was over Chapters cover each major phase in the evolution of the tank and of tank warfare during the period from the battles fought in the late 1940s and 1950s with Second World War armoured vehicles like the T 34 and the Sherman through to the designs common in the 1960s and 1970s like the T 55 Centurion Challenger and M60 Patton to the confrontation between the M1 Abrams and the T 72 during the Gulf War in 1991 Technical and design developments are important elements throughout the story but so are dramatic changes in tactics and armaments which mean the tank has an increasingly uncertain role in modern warfare

**Tank Warfare** Christer Jorgensen,Chris Mann,2001 This military history provides the reader with a guide to tank warfare including the development of tank tactics and strategy Also included are details of great tank battles such as Cambrai Kursk Chinese Farm and the Gulf War **Tank Warfare, 1939-1945** Simon Forty,2020-07-19 On the battlefields of Europe and North Africa during the Second World War tanks played a key role and the intense pressure of combat drove forward tank design and tactics at an extraordinary rate In a few years on all sides tank warfare was transformed This is the dramatic process that Simon and Jonathan Forty chronicle in this heavily illustrated history They

describe the fundamentals of pre war tank design and compare the theories formulated in the 1930s as to how they should be used in battle Then they show how the harsh experience of the German blitzkrieg campaigns in Poland France and the Soviet Union compelled the Western Allies to reconsider their equipment organization and tactics and how the Germans responded to the Allied challenge The speed of progress is demonstrated in the selection of over 180 archive photographs which record as only photographs can the conditions of war on each battle front They also give a vivid impression of what armoured warfare was like for the tank crews of 75 years ago

**The Tanks of World War II** Charles River Charles River Editors,2018-05-04 Includes pictures Includes accounts of the fighting Includes online resources and a bibliography for further reading World War II was thus the culmination of a quarter century of tank development and it would also be the first major test of tanks in mobile warfare during which they had to face other tanks However many of the tanks were constructed with the static warfare of the Western Front in mind and were thus slow and had short operational ranges Others were too light to face opposing tanks or the new generation of anti tank weapons that hadn t existed in World War I The unsuitability of these tank models for this new kind of warfare was quickly recognized and the belligerent powers scrambled to create better designs As each new improved model came off the assembly lines the opposing powers rushed to create a tank that could beat it In that regard World War II was also a war between rival engineers At the same time German military officials were at the forefront of developing new ideologies when it came to utilizing their tanks to maximum effect Heinz Guderian even published a book on the topic before becoming one of the Third Reich s most effective tank commanders Moreover during the German invasion of Poland Nazi forces gained experience they would use across Europe and in Russia After all it was in Poland that the Wehrmacht saw action for the first time conducting what was not only an invasion but also a trial run of its new equipment and tactics The Polish invasion proved invaluable in providing the German high command with a low risk high value live fire exercise for their newly minted war machine while the actual combat experience highlighted the remaining flaws in the system During the campaign the Germans honed tactics and weapon systems for the massive struggle with the Soviets British and United States that loomed on the horizon The beginning of World War II found the major powers developing tanks to some extent but lingering ideas from World War I affected the development of tanks during the Interwar period As a result aside from the blitzkrieg doctrine developed by the Nazis tanks were still used in terms of infantry support and there were few wars during this period to give strategists the chance to develop better uses for the new armored vehicles before World War II started Commanders soon found that many of the tanks fielded in the campaigns of 1939 1941 lacked the necessary armor guns and designs The Allies learned from the Germans as well The first and most obvious lesson was to equip each tank with a radio At the beginning of the war most Allied tanks did not have radios and used small flags to signal to each other an unreliable means under ideal conditions let alone in the midst of battlefield chaos The Panzers on the other hand were equipped with radios from the very start providing German tank commanders with far more control over

their units Throughout the war designers learned how to improve suspension reorganize the interior to give the crews more room and incorporate other upgrades that helped with the overall function of the tank Practical experience from the tank crews was of vital importance in these developments Inevitably tactics evolved throughout the war The Germans were early leaders in tank tactics as their successes from Poland through the opening phases of Operation Barbarossa demonstrated The main German tank tactic was the so called Schwerpunkt center of gravity in which a concentration of tanks achieved a local superiority broke through and drove deep behind enemy lines carving up frontline enemy forces that could then be surrounded and taken out by support tanks infantry and artillery This is why German tanks were built for speed while maintaining good armor and weaponry
