Geothermal energy: The engine of our planet

- 1 — Radioactive Decay**
The primary driver of Earth's internal heat is the radioactive decay of elements like uranium, thorium, and potassium within the planet's core and mantle.
- 2 — Pressure and Compression**
Gravitational forces compress the Earth's interior, generating additional heat through the immense pressures within the planet.
- 3 — Plate Tectonics**
The constant movement and interaction of Earth's tectonic plates is fueled by the transfer of heat from the planet's interior to the surface.
