Bandara, 2002-04-03 In *Targets for Cancer Chemotherapy Transcription Factors and Other Nuclear Proteins* a panel of leading basic researchers pharmaceutical scientists and clinical oncologists explain in detail the therapeutically relevant protein targets that contribute to cancer pathology and spell out their implications for cancer drug discovery and clinical application The authors identify and illuminate selected transcription factor oncoproteins and tumor suppressors together with nuclear proteins that are central to the phenotype of the tumor cell involved in chromatin control The emphasis is on new targets and approaches to cancer treatment derived from the cancer cell cycle gene control targets and angiogenesis *Targeted Cancer Therapies, From Small Molecules to Antibodies* Zhe-Sheng Chen, Jian-ye Zhang, Yunkai Zhang, Yan-yan Yan, 2020-07-22 [Targets for Cancer Chemotherapy. Cancer Drug Discovery and Development](#) Nicholas B. La Thangue, Lasantha R. Bandara, 2002 Recent scientific discoveries concerning therapeutically relevant protein targets that contribute to cancer pathology have opened new possibilities in the search for effective cancer treatments In *Targets for Cancer Chemotherapy Transcription Factors and Other Nuclear Proteins* a panel of leading basic researchers pharmaceutical scientists and clinical oncologists provide in an easy to understand format a detailed account of these latest research developments and spell out their implications for cancer drug discovery and clinical application The authors identify and illuminate selected transcription factor oncoproteins and tumor suppressors together with nuclear proteins that are central to the phenotype of the tumor cell and including recently elucidated enzymes involved with chromatin control The emphasis is on new targets and approaches to cancer treatment derived from the cancer cell cycle gene and chromatin control targets and angiogenesis Among the targets considered are E2F Myc oncoproteins hypoxic signaling pathways Mdm2 and ARF the AP 1 family of transcription factors histone deacetylase histone acetyl transferase apoptin and nuclear catenin signaling Up to date and insightful *Targets for Cancer Chemotherapy Transcription Factors and Other Nuclear Proteins* shows clearly how our new understanding of critical molecular targets in cancer cells can be applied to cancer drug discovery to provide new drug discovery platforms both for future development and for new target based medicines for cancer patients *Targets for Cancer Chemotherapy* Nicholas B. La Thangue, Lasantha R. Bandara, 2014-09-01 **Targeted Cancer Therapy in Biomedical Engineering** Rishabha Malviya, Sonali Sundram, 2023-04-11 This book highlights the role of Biomedical Engineering BME used in diagnosis e.g body scanners and treatment radiation therapy and minimal access surgery in order to prevent various diseases In recent years an important progress has been made in the expansion of biomedical microdevices which has a major role in diagnosis and therapy of cancer When fighting cancer efficacy and speed are of the utmost importance A recently developed microfluidic chip has enabled a breakthrough in testing the efficacy of specialized cancer drugs Effective cancer targeting therapies will require both passive and active targeting strategies and a thorough understanding of physiologic barriers to targeted drug

delivery Targeted cancer treatments in development and the new combinatorial approaches show promise for improving targeted anticancer drug delivery and improving treatment outcomes This book discusses the advancements and innovations in the field of BME that improve the diagnosis and treatment of cancer This book is focused on bioengineering approaches to improve targeted delivery for cancer therapeutics which include particles targeting moieties and stimuli responsive drug release mechanisms This book is a useful resource for students researchers and professionals in BME and medicine

MicroRNA Targeted Cancer Therapy Fazlul H. Sarkar,2014-04-22 Since the discovery of microRNAs miRNAs some twenty years ago by Victor Ambros David Baulcombe and Gary Ruvkun these three scientists worked to uncover the mystery of miRNA the small segments of nucleotides that silence genes While studying the development of the nematode worm Ambros and Ruvkun discovered miRNA in animals while Baulcombe discovered it in plants Since their discovery it took more than two decade to fully appreciate the value of miRNA in human health and diseases Emerging evidence suggest that the activation of oncogenes and or the inactivation of tumor suppressor genes contribute to the development and progression of tumors The regulation of genes is by far controlled by many transcription factors which are often deregulated during the development and progression of cancer In addition emerging evidence clearly suggests that the deregulation of miRNAs or small non coding RNAs could also regulate the expression of genes and likewise miRNA genes are also regulated by transcription factors The most attractive feature of miRNAs is that one miRNA can regulate many target genes mRNAs and thus miRNA targeted therapy is highly promising because multiple genes could be regulated by targeting a single miRNA which becomes very important for the killing of highly heterogeneous populations of cancer cells within a tumor mass Therefore miRNA targeted therapy is an attractive attribute of miRNA research which is covered through eighteen chapters compiled in this book MicroRNA targeted Cancer therapy and it is hoped that the field of miRNA research will be appreciated through critical reading of these chapters on the cutting edge research on miRNAs **Advances in Cancer Treatment**

Iago Dillion Lima Cavalcanti, José Cleberson Santos Soares,2021-02-24 This work covers the pathophysiology of cancer exploring the difficulty of optimal treatment due to the complexity and diversity of cancer types The search for distinctive molecular biology characteristics of tumor cells is especially relevant in the identification of overexpressed receptors and proteins that can be used as a target for cancer treatment We highlight the main therapeutic modalities particularly conventional systemic chemotherapy addressing its mechanisms of action therapeutic classes and even the toxic effects We also describe the main tumor markers their importance in the diagnosis and treatment of cancer and the specificity of tumor cells The first chapters serve as an introduction to the central topic of this book targeted therapy Key aspects of target therapy such as classes of drugs immunotherapy monoclonal antibodies checkpoint inhibitors cancer vaccines and tyrosine kinase inhibitors are presented and for each one the benefits as well as the adverse effects are reported Chapter 6 compares conventional systemic chemotherapy and targeted therapy identifies the risks and benefits and also the eligibility criteria for

patient care The possibility of targeted therapy replacing conventional chemotherapy is discussed while reviewing studies that demonstrate the benefits of combining both types of treatment Finally the introduction of pharmaceutical nanotechnology to improve antineoplastic agents is addressed in the last chapter and sets the direction for future research in cancer treatment This is a valuable resource for many health professionals including physicians pharmacists nurses researchers and students interested in the field of oncology

A Beginner's Guide to Targeted Cancer Treatments Elaine Vickers, 2018-07-23 Highly Commended in the category of Oncology at the British Medical Association Awards 2019 The accessible guide to the principles behind new more targeted drug treatments for cancer Written for anyone who encounters cancer patients cancer data or cancer terminology but have no more than a passing knowledge of cell biology A Beginner's Guide to Targeted Cancer Treatments provides an understanding of how cancer works and the many new treatments available Using over 100 original illustrations this accessible handbook covers the biology and mechanisms behind a huge range of targeted drug treatments including many new immunotherapies Dr Vickers translates a complex and often overwhelming topic into something digestible and easily understood She also explains what cancer is how it behaves and how our understanding of cancer has changed in recent years Each chapter takes the reader through how new cancer drugs work and their benefits and limitations With the help of this book readers will be able to better understand more complex in depth articles in journals and books and develop their knowledge This vital resource Offers the latest insights into cancer biology Provides a broad understanding of how targeted cancer treatments work Describes many of the new immunotherapy approaches to cancer treatment such as checkpoint inhibitors and CAR modified T cells Helps readers feel confident discussing treatment options with colleagues and patients Provides an overview of which treatments are relevant to each of the most common solid tumours and haematological cancers and the rationale behind them Demystifies the jargon terms such as the EMT cancer stem cells monoclonal antibodies kinase inhibitors angiogenesis inhibitors etc Explains the resistance mechanisms to many new treatments including issues such as the way cancer cells diversify and evolve and the complex environment in which they live

New Molecular Targets for Cancer Chemotherapy David J. Kerr, Paul Workman, 1994-06-27 This book covers a wide range of novel biochemical targets that appear to be the best leads in terms of designing novel targets for anticancer drug design *New Molecular Targets for Cancer Chemotherapy* is a unique multi disciplinary effort with internationally respected authors from the fields of growth factor receptor interaction phosphoinositide and phospholipase signal transduction and DNA drug binding interactions The science is placed in clinical context and illustrations explain how clinicians can incorporate a mechanistic pharmacodynamic approach into early clinical trial design

Drug Resistance As a Biochemical Target in Cancer Chemotherapy Makoto Ogawa, 1991-11-12 *Drug Resistance as a Biochemical Target in Cancer Chemotherapy* covers the proceedings of the 13th Bristol Myers Squibb Symposium on Cancer Research entitled *Drug Resistance as a Biochemical Target in Cancer Chemotherapy* hosted by the

Japanese Foundation for Cancer Research in Tokyo This book is divided into four parts encompassing 18 chapters that summarize the results of both preclinical and clinical research on circumvention of drug resistance The first two parts discuss the genetic aspects of multidrug resistance and the proteins involved in drug resistance These parts also examine the structure function and expression of P glycoproteins with an emphasis on the role of these proteins as targets for cancer chemotherapy The third part describes the methods for detection of P glycoprotein and its antagonists to counter clinical drug resistance This topic is followed by a discussion on the interactions among steroid hormones steroid hormone receptors antiandrogens biological response modifiers and cytotoxic drugs in human breast cancer The concluding part explores the clinical applications of chemosensitizers in cancer therapy This part also considers the alternative clinical approaches against drug failure including non cross resistant therapies autologous bone marrow transplantation dose intensive therapy and high dose chemotherapy Biomedical scientists and researchers and clinicians will find this book invaluable **Cancer**
