Unifying the Philosophy of Truth Theodora Achourioti, Henri Galinon, José Martínez Fernández, Kentaro Fujimoto, 2015-06-16 This anthology of the very latest research on truth features the work of recognized luminaries in the field put together following a rigorous refereeing process Along with an introduction outlining the central issues in the field it provides a unique and unrivaled view of contemporary work on the nature of truth with papers selected from key conferences in 2011 such as Truth Be Told Amsterdam Truth at Work Paris Paradoxes of Truth and Denotation Barcelona and Axiomatic Theories of Truth Oxford Studying the nature of the concept of truth has always been a core role of philosophy but recent years have been a boom time in the topic With a wealth of recent conferences examining the subject from various angles this collection of essays recognizes the pressing need for a volume that brings scholars up to date on the arguments Offering academics and graduate students alike a much needed repository of today's cutting edge work in this vital topic of philosophy the volume is required reading for anyone needing to keep abreast of developments and is certain to act as a catalyst for further innovation and research

Time, Tense, and Causation Michael Tooley, 1997 Michael Tooley presents a major new philosophical study of time and its relation to causation The nature of time has always been one of the most fascinating and perplexing problems of philosophy it has in recent years become the focus of vigorous debate between advocates of rival theories The traditional tensed accounts of time which hold that time has a direction and that the flow of time is part of the nature of the universe have been challenged by tenseless accounts of time according to which past present and future are merely subjective features of experience rather than objective features of events Time Tense and Causation offers a new approach in many ways intermediate between these two rivals Tooley shares with tensed approaches the views that the universe is dynamic and that the past and present are real while the future is not but he rejects the view that this points to the existence of irreducible tensed facts Tooley's approach accounts for time in terms of its relation to causation he argues that the direction of time is based upon the direction of causation and that the key to understanding the dynamic nature of the universe is to understand the nature of causation He analyses tensed concepts and discusses semantic issues about truth and time Finally addressing the formidable difficulties posed for tensed accounts of time by the Special Theory of Relativity he suggests that a

modified version of the theory compatible with the account of time in this book is to be preferred to the standard version

Time Tense and Causation is rich in sophisticated and stimulating discussions of many of the deepest problems of metaphysics It will be essential reading for anyone specialising in this area of philosophy Philosophical Logic Sybil Wolfram, 1989 A basic introduction to the subject which addresses questions of truth and meaning providing a basis for much of what is discussed elsewhere in philosophy Up to date and comprehensive *Experience and Theory* Stephan Korner, 2013-04-15 Originally published in 1966 This volume analyzes the general structure of scientific theories their relation to experience and to non scientific thought Part One is concerned with the logic underlying empirical discourse before its subjection to the various constraints imposed by the logico mathematical framework of scientific theories upon their content Part Two is devoted to an examination of this framework and in particular to showing that the deductive organization of a field of experience is by that very act a modification of empirical discourse and an idealization of its subject matter Part Three analyzes the concordance between theories and experience and the relevance of science to moral and religious beliefs Vagueness and Degrees of Truth Nicholas J. J. Smith, 2008-11-06 In *Vagueness and Degrees of Truth* Nicholas Smith develops a new theory of vagueness fuzzy plurivaluationism A predicate is said to be vague if there is no sharply defined boundary between the things to which it applies and the things to which it does not apply For example heavy is vague in a way that weighs over 20 kilograms is not A great many predicates both in everyday talk and in a wide array of theoretical vocabularies from law to psychology to engineering are vague Smith argues on the basis of a detailed account of the defining features of vagueness that an accurate theory of vagueness must involve the idea that truth comes in degrees The core idea of degrees of truth is that while some sentences are true and some are false others possess intermediate truth values they are truer than the false sentences but not as true as the true ones Degree theoretic treatments of vagueness have been proposed in the past but all have encountered significant objections In light of these Smith develops a new type of degree theory Its innovations include a definition of logical consequence that allows the derivation of a classical consequence relation from the degree theoretic semantics a unified account of degrees of truth and subjective probabilities and the incorporation of semantic indeterminacy the view that vague statements need not have unique meanings into the degree theoretic framework As well as being essential reading for those working on vagueness Smith's book provides an excellent entry point for newcomers to the area both from elsewhere in philosophy and from computer science logic and engineering It contains a thorough introduction to existing theories of vagueness and to the requisite logical background *Truth*, 1927
