*Sustaining America's Urban Trees and Forests* David John Nowak, 2010 Close to 80 percent of the U.S. population lives in urban areas and depends on the essential ecological economic and social benefits provided by urban trees and forests However the distribution of urban tree cover and the benefits of urban forests vary across the United States as do the challenges of sustaining this important resource As urban areas expand across the country the importance of the benefits that urban forests provide as well as the challenges to their conservation and maintenance will increase The purpose of this report is to provide an overview of the current status and benefits of America's urban forests compare differences in urban forest canopy cover among regions and discuss challenges facing urban forests and their implications for urban forest management

**The Urban Forest** David Pearlmutter, Carlo Calafapietra, Roeland Samson, Liz O'Brien, Silvija Krajter Ostoić, Giovanni Sanesi, Rocío Alonso del Amo, 2017-02-27 This book focuses on urban green infrastructure the interconnected web of vegetated spaces like street trees parks and peri urban forests that provide essential ecosystem services in cities The green infrastructure approach embodies the idea that these services such as storm water runoff control pollutant filtration and amenities for outdoor recreation are just as vital for a modern city as those provided by any other type of infrastructure Ensuring that these ecosystem services are indeed delivered in an equitable and sustainable way requires knowledge of the physical attributes of trees and urban green spaces tools for coping with the complex social and cultural dynamics and an understanding of how these factors can be integrated in better governance practices By conveying the findings and recommendations of COST Action FP1204 GreenInUrbs this volume summarizes the collaborative efforts of researchers and practitioners from across

Europe to address these challenges *Assessing Urban Forest Effects and Values of the Great Plains* Nowak,2015-02-14 This report details the evaluation of the urban tree resources of the north central Great Plains region of the United States Specifically this report provides a more comprehensive understanding of the species composition and structural and functional benefits of the urban forests in the states of Kansas 33 1 million urban trees Nebraska 13 3 million urban trees North Dakota 975 000 urban trees and South Dakota 5 4 million urban trees Information on the structure and functions of the urban forest can be used to inform urban forest management programs and to integrate urban forests within plans to improve environmental quality throughout the Great Plains region The results are reported for each state and may be accessed at <http://www.nrs.fs.fed.us/data/urban/> Urban and Community Forests of the Pacific Region David John Nowak,2010 Encyclopedia of the World's Biomes ,2020-06-26 Encyclopedia of the World's Biomes is a unique five volume reference that provides a global synthesis of biomes including the latest science All of the book's chapters follow a common thematic order that spans biodiversity importance principal anthropogenic stressors and trends changing climatic conditions and conservation strategies for maintaining biomes in an increasingly human dominated world This work is a one stop shop that gives users access to up to date informative articles that go deeper in content than any currently available publication Offers students and researchers a one stop shop for information currently only available in scattered or non technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information **Assessing urban forest effects and values New York City's urban forest** ,2007 *Urban Forestry in the Streets* Gregory W. Tarver (Jr.),2015 Urban forestry or the greening of cities has a sizable body of literature that explores urban forest ecosystem service especially the ability of trees to combat environmental pollution and extreme heating of global climate change However the social issues pertaining to the implementation management and sustainability of urban forests are minimally identified My dissertation research into community based greening effort into West Oakland a predominantly low income African American community provides theoretical and practical insight into the complications and successes of urban forestry This manuscript fills large gaps of urban forest information by investigating the historical challenges that predispose communities to low canopy cover and high environmental pollution urban forestry socio political issues networks and conflicts and the human to tree reciprocal relations that facilitate the development of human consciousness This dissertation addresses three research questions I first investigate how historical socio political and economic trends have affected environmental conditions and urban forestry in current day West Oakland Second how is urban forest organizational agency shaped through social and political engagement in greening stewardship and research activities Third how does the relationship between humans and urban trees forests influence human consciousness My methodology revolved around my case study and greater than six year participatory engagement with Urban Releaf 501 c 3 where I held roles as graduate researcher and director of education I

also relied upon key informant interviews spontaneous individual and group dialogues with employees and persons involved with greening activities and extensive archival research spanning the 1930s through to 2012 specifically West Oakland but encompassing the City of Oakland My findings reveal that West Oakland residents were subjected to racialized urban political economic processes that socially and politically marginalized their community At the same time the trees in this area were also subject to the same processes and were environmentally marginalized from the Oakland municipal forest Both humans and trees received reduced services from the City of Oakland while redevelopment reshaped removed and devitalized the human and urban forest community Grassroots efforts in the 1950 1970s were the exceptional force that resisted and redirected these government and state top down processes and made major strides to enhance the social and environmental quality of life for West Oaklanders My findings in chapter four through an actor network theory framework elucidate the importance of socio political networks in the individual and collective agency of Urban Releaf Ultimately social and political competencies are the primary measure of an urban forest actors agential power and success Urban Releaf relies on socio political networks for practically every urban forestry activity These network associations built maintained and extended by Urban Releaf are especially relevant in accessing municipal space forestry technical support fundraising and negotiating the diverse types of conflicts with individuals organizations and agencies Socio political skills not environmental forestry skills are the primary constituents to Urban Releaf s success and longevity In chapter five I contribute to human consciousness and Black studies research by revealing the reciprocal relationship that develops through hybrid human and tree relations In the first case study of Oakland Tree Task Force Black Power based socio political ideology was merged with inherent and symbolic agency of trees The results were the development of the Black Forest and behavioral changes of West Oakland residents into tree planters and long term urban forest caretakers of the Oakland urban forest This nuanced expression of Black Power was characteristic of local based Oakland grassroots community engaged activism In my second case study I show how the nonhuman agency of trees through the production of ecosystem services enrolls and convinces humans to plant and provide long term stewardship of the Oakland urban forest Through these activities direct human to tree and human to human engagement results in an enhancement of environmental and interpersonal consciousness of Urban Releaf s youth and young adult urban forest caretakers Overall by showing grassroots leadership socio environmental programming and the reciprocal dynamics of human to tree relations this dissertation research provides valuable insight for scholars advocates and professionals engaged in greening cities and is particularly relevant for urban forestry projects and programs in low income communities of color [Assessing Urban Forest Effects and Values](#) ,2006 An analysis of trees in Washington D C reveals that this city has about 1 928 000 trees with canopies that cover 28 6 percent of the area The most common tree species are American beech red maple and boxelder The urban forest currently store about 526 000 tons of carbon valued at 9 7 million In addition these trees remove about 16 200 tons of carbon per year 299 000 per year and about

540 tons of air pollution per year 2 5 million per year The structural or compensatory value is estimated at 3 6 billion Information on the structure and functions of the urban forest can be used to improve and augment support for urban forest management programs and to integrate urban forests within plans to improve environmental quality in the Washington D C area

**Storms Over the Urban Forest** Lisa L. Burban,1994

**Nontimber Forest Products in the United States** Eric T. Jones,Rebecca Jean McLain,James F. Weigand,2002 A quiet revolution is taking place in America s forests Once seen primarily as stands of timber our woodlands are now prized as a rich source of a wide range of commodities from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized Now as timber harvesting becomes more mechanized and requires less labor the image of the lumberjack is being replaced by that of the forager This book provides the first comprehensive examination of nontimber forest products NTFPs in the United States illustrating their diverse importance describing the people who harvest them and outlining the steps that are being taken to ensure access to them As the first extensive national overview of NTFP policy and management specific to the United States it brings together research from numerous disciplines and analytical perspectives such as economics mycology history ecology law entomology forestry geography and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products an overview of uses and users and discussions of sustainable management issues associated with ecology cultural traditions forest policy and commerce They examine some of the major social economic and biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape from the Pacific Northwest to the Caribbean From honey production to a review of nontimber forest economies still active in the United States such as the Ojibway harvest of plants recounted here the book takes in the whole breadth of recent NTFP issues including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands No other volume offers such a comprehensive overview of NTFPs in North America By examining all aspects of these products it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also protecting the future of our forests
