

The Vascular System

What is the vascular system?

The vascular system is a network of blood vessels that transport blood throughout the body. It consists of the heart, arteries, and veins. The system is responsible for delivering oxygen and nutrients to the body's cells and removing waste products.

Red blood cells

Composition of blood

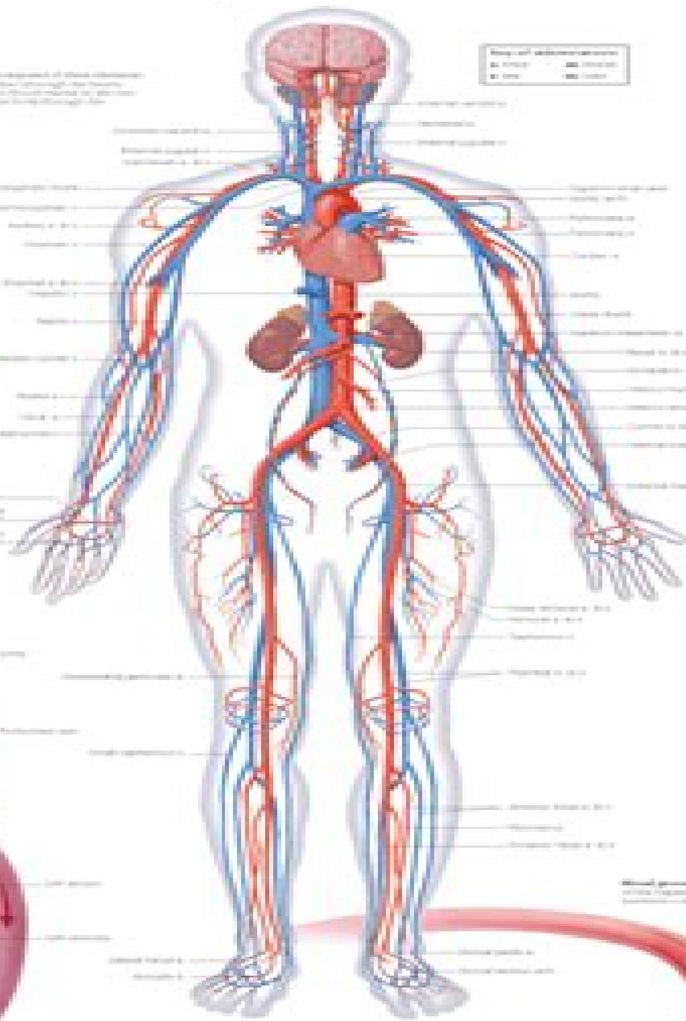

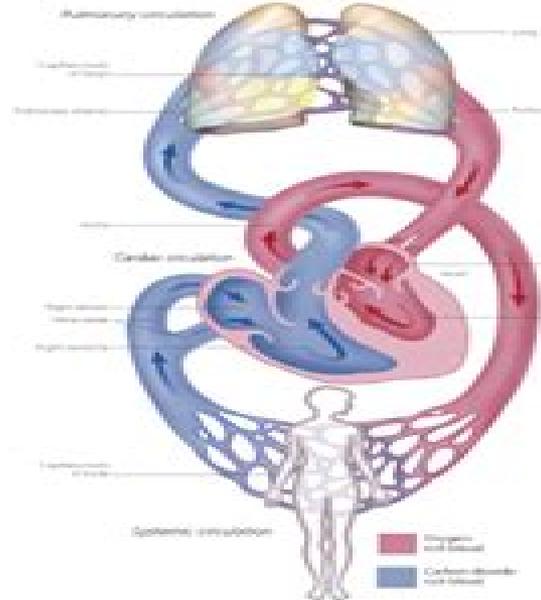

Plasma
Water 90%
Solids 10%

Packed plasma
Red blood cells 45%
White blood cells and proteins 1%

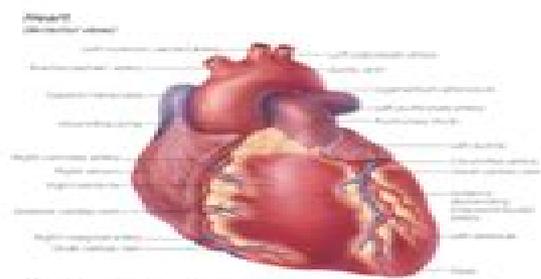

Red blood cell (cross-section)

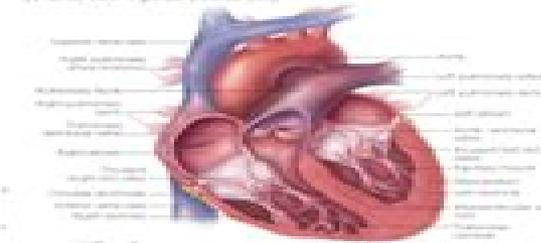

Molecular system circulations

Artery	100 μm
Vein	10 μm

Heart (anterior view)

The heart

The heart is a muscular organ that pumps blood throughout the body. It consists of four chambers: the right atrium, right ventricle, left atrium, and left ventricle. The heart is located in the chest cavity, between the lungs.

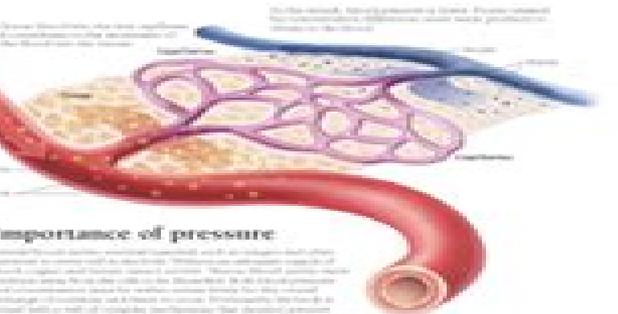

Typical artery (cross-section)

Typical vein (cross-section)

Blood vessels

Blood vessels are the network of tubes that carry blood throughout the body. They are divided into arteries, veins, and capillaries. Arteries carry oxygenated blood away from the heart, while veins carry deoxygenated blood back to the heart. Capillaries are the smallest blood vessels and are where the exchange of oxygen and nutrients occurs.

Importance of pressure

Blood pressure is the force exerted by the blood against the walls of the blood vessels. It is essential for the flow of blood throughout the body. High blood pressure can lead to various health problems, including heart disease and stroke. Low blood pressure can lead to dizziness and fainting.

Arterial valve work

Arteries have the ability to contract and relax to regulate blood flow. This is done by the smooth muscle in the vessel wall. When the vessel contracts, the lumen narrows, and when it relaxes, the lumen widens. This helps to maintain a constant flow of blood to the body's tissues.
