Wheelchair Information:

The Wheelchair Evaluation Mitch Batavia, 2010-10-22 *The Wheelchair Evaluation A Clinician's Guide* Second Edition is an updated practical and concise reference on the wheelchair prescription process. It's perfect for students and clinicians in the health fields who work with physically disabled individuals in need of a wheelchair. This book is a portable hands-on manual that implements a real-world approach to patient evaluation, choice of wheelchair components, documentation, and funding.

Journal of Rehabilitation Research and Development, 1996 **Journal of Rehabilitation Research & Development**, 1997 *Rehabilitation R & D Progress Reports*, 1995 *Service Robot Applications* Yoshihiko Takahashi, 2008-08-01 The aim of this book is to provide new ideas, original results, and practical experiences regarding service robotics. This book provides only a small example of this research activity but it covers a great deal of what has been done in the field recently. Furthermore, it works as a valuable resource for researchers interested in this field. **Seating and Wheeled Mobility**

Michelle L. Lange, Jean L. Minkel, 2024-12-30 Fully updated and expanded in its second edition, *Seating and Wheeled Mobility: A Clinical Resource Guide* presents clinical assessment considerations when working with a person with a mobility disability. The book provides a wide spectrum of information, from foundational information for those practitioners who are new to the field to in-depth, population-specific information for practitioners who perhaps have not worked with a particular population in the past. The book is divided into sections, each addressing a different area of clinical practice in wheelchair seating and mobility. The first section is an in-depth presentation of the assessment process and pressure management. The range of available seating supports is presented as part of the product selection process, including matching the person's needs with available technology. The second section focuses on 24-hour postural care. Three types of sitters are presented: hands-free, hands-dependent, and prop sitters. Included is the most current method to measure and describe the seated person and related support surfaces needed when recommending a device. The third section lays the foundation for clinical decision-making around the selection and fit of the most appropriate wheeled mobility device: manual power wheelchair or scooter. The fourth section provides in-depth clinical applications for each mobility category. On-time mobility for the very young, power seating, and mobility skills training are addressed. The fifth section provides population-specific clinical application of pressure management and mobility for the pediatric, geriatric, and bariatric populations, as well as persons with both degenerative and complex neuromuscular impairments. The sixth section presents additional considerations when working with persons who are aging with a disability, considerations of the environment of use, safe transport of a wheelchair, and the application of wheelchair standards in the clinic. Finally, measuring outcomes throughout the service provision process and a look at the past, present, and future of complex rehab technology is included. Richly illustrated throughout, this book has been carefully designed to support occupational and physical therapists, suppliers, distributors, and funders/payers who are interested in wheelchair seating and mobility assessment and applications. **The Massachusetts Register**, 2017-07-14
