When Science Offers Salvation:

When Science Offers Salvation Rebecca Dresser,2001-03-22 Patient advocates can help make research more ethical but advocacy raises ethical issues of its own When Science Offers Salvation Rebecca Susan Dresser,2023 In examining how advocates have transformed health research the author of this study examines patient advocacy through the lens of research ethics **Christian Science Sentinel** ,1899 **The Christian Science Journal** ,1912 Playing Politics with Science David B. Resnik,2009-01-20 In the last decade science in the United States has become increasingly politicized as government officials have been accused of manipulating distorting subverting and censoring science for ideological purposes Political gamesmanship has played a major role in many different areas of science including the debate over global climate change embryonic stem cell research government funding of research the FDA s approval process military intelligence related to Iraq research with human subjects and the teaching of evolution in public schools In Playing Politics with Science David B Resnik explores the philosophical political and ethical issues related to the politicalization of science and develops a conceptual framework for thinking about government restrictions on scientific practice Resnik argues that the public has a right and a duty to oversee scientific research to protect important social values and hold scientists accountable for their actions but that inappropriate government control over science can erode the integrity and trustworthiness of research hamper scientific creativity and innovation undermine the fairness and effectiveness of government and policies informed by science discourage talented researchers from working for the government and violate the freedom of scientists Resnik also makes policy recommendations for protecting science from politicalization and maintains that scientific autonomy and government control must be properly balanced so that restrictions on science can benefit society without undermining scientific research education and expert advice Gene Transfer and the Ethics of First-in-Human Research Jonathan Kimmelman,2010 Human gene transfer is widely regarded as one of the most promising technologies for the treatment of a variety of disorders but it presents practitioners with a variety of difficult ethical questions Gene Transfer and the Ethics of First in Human Research examines the ethical and policy dimensions of testing interventions in human beings for the first time The book discusses the difficult ethical challenges that arise from attempting to translate laboratory discoveries into clinical applications These range from which available techniques to use when to initiate human testing questions of consent expectation in public arenas how to define acceptable risk and the inclusion of vulnerable or disadvantaged subjects in early phase trials This book is relevant to ethicists legal practitioners policy makers geneticists and clinicians involved in clinical trials of new medical interventions **Ethics and Moral Science** Lucien Lévy-Bruhl,1905 *A Humanistic Approach to Health Promotion* David R. Buchanan,2020-11-25 This book presents a distinct ethically robust framework for improving population health when the major causes of disease death and disability are closely associated with human behaviors Rather than relying on a scientific technological strategy aimed at developing ever more powerful and effective techniques for

changing behaviors a humanistic approach recognizes the unique human capacity for dignity and moral decision making As an essential alternative to the scientific assumption of determinism a humanistic framework is based on the equally viable assumption that human beings have the capacity to exercise autonomy in pursuing their life plans If people can choose how they want to live their lives then it is imperative to respect and cultivate their autonomy in making health promoting decisions A scientific approach is unsurpassed at identifying effective means for stopping and killing bacteria the same methods are not appropriate however when the objective is to alter human behavior In a humanistic framework it is important to acknowledge that autonomous choices are not completely unrestrained the human condition has significant physical and social limitations and that certain readily identifiable social groups face much greater constraints than others most significantly due to poverty and racism As explained and justified in this book the most important task for health promotion is to promote autonomy and to do this by redressing the hugely disparate yet corrigible barriers faced by people occupying distinct social positions This project is a matter of social justice not a scientific and technological problem to be solved but a moral and political endeavor to engage fellow citizens in strengthening our social institutions to enable everyone to realize their innate capacities to the fullest extent possible The book provides ethical standards case studies and concrete practical analogies to demonstrate the feasibility and benefits of moving the field of health promotion in a new humanistic direction

Aubrey Lackington Moore,1905 **Exploring Challenges, Progress, and New Models for Engaging the Public in the Clinical Research Enterprise** Institute of Medicine,Board on Health Sciences Policy,Clinical Research Roundtable,2003-07-25 This report is a summary of a workshop focused on exploring the role of the public in the Clinical Research Enterprise The Clinical Research Enterprise depends upon practitioners policy makers and others for participation in trials ethical review of research and continued support of research funding However the role of the public has expanded beyond this traditional model as consumers have begun to demand a role in the formulation of the research agenda and in the design review and pursuit of research This report identifies four major challenges to the Clinical Research Enterprise enhancing public participation in clinical research which includes making the system safer and faster developing the necessary information systems that are needed to make the clinical research enterprise a coordinated and seamless whole fostering an adequately trained workforce and ensuring adequate funding for clinical research In addition the report identifies two translational blocks from basic science into clinical practice and from the clinical identification of things that work into broader application to improve medical care and the public s health This workshop summary addresses the contribution of the public to overcoming these obstacles
