## **Urolithiasis Research:**

**Urolithiasis** Lynwood H. Smith,2013-04-17 In 1968 Drs B E C Nordin and A Hodgkinson organized the First International Symposium on Urolithiasis Research in Leeds England One hundred and five participants from continental Europe Great Britain and the United States met to review their work and exchange ideas regarding the formation of urinary calculi This meeting achieved several important goals It pulled together a nidus of workers in the many scientific disciplines that relate to urolithiasis This nidus served as the seed for research growth in a complex interdisciplinary field It established a forum for continuing communication in urolithiasis research with subsequent symposia being held every 4 years The Williamsburg Symposium was the fourth in the Leeds Madrid Davos series involving 186 participants from throughout the world A stated emphasis was on clinical research under way in the field There were no invited speakers and for the first time the 41 papers that were presented orally at the meeting were selected from 184 submitted abstracts A total of 134 papers were presented in the poster sessions in the afternoons where informal exchange between interested participants and investigators could occur without the restrictions of a plenary session Virtually all areas of urolithiasis research from the most fundamental physical chemistry to clinical patterns of disease and specific modes of treatment were presented reviewed and discussed during the meeting

**Biominerals** F.C.M. Driessens, R.K. Verbeeck, 1990-09-26 This book provides a comprehensive analysis of biominerals in particular phosphates and carbonates of calcium The book begins with a discussion of the theories of solid state chemistry and thermodynamics of ionic solid solutions and applies these theories to show how physiological constituents like sodium magnesium carbonate chloride fluoride lead or strontium influence the formation stability and solubility of calcium phosphates The results of this discussion are then applied to a critical evaluation of data regarding minerals in bone dentin and tooth enamel their formation during growth and turn over their stability under physiological conditions and their breakdown under pathological conditions These principles are also applied to pathological calcifications such as renal calculi arterial wall calcifications chondrocalcinosis dental calculus and salivary stones A similar approach is

used as the authors discuss carbonations such as calcite dolomite and aragonite The book also includes an extensive analysis of the advantageous effects of magnesium supplementation The wealth of knowledge in this extensive treatise of biominerals is valuable to medical dental and ecological biologists as well as scientists and clinicians in the fields of osteoporosis bone diseases caries renal stone disease parodontology and nutrition

**Urolithiasis** ,2012-12-06 The handbook on lithiasis edited by Kurt Boshamer and originally brought out in 1961 was for more than two decades the standard work in this field for researchers and clinicians alike However our knowl edge of urolithiasis has been increased so enormously by worldwide interdisciplinary research into the genesis of urinary calculi by the new treatment possibilities opened up principally by advances in tech nology and by the success achieved in prevention of recurrence that it is almost impossible to take in all the relevant journal articles books chapters monographs and proceedings It was therefore our aim in this the first of two independent vol umes to provide a concise but comprehensive summary of current knowledge concerning the morphology and composition of calculi epidemiology pathogenesis and diagnostic techniques The most re cent developments are described and nothing in the world literature is ignored A second volume will cover medical therapy operative in strumental and noninvasive treatment and prophylaxis To have any chance of success treatment and prophylaxis must be based on knowledge of calculus formation Study of the composition of calculi has yielded important information regarding the conditions for formation and this underlines once again the great value of analy sis of urinary concretions Evaluation of epidemiological data has im portant consequences for the individual patient

Vahlensieck,2012-12-06 Urolithiasis is a common disorder which is recognised in most parts of the world and occurs in both man and animals The multifactorial nature of the problem requires an interdisciplinary approach which has always been a feature of this series of International Symposia which started in Leeds in 1968 and has progressed at four yearly intervals through Madrid Davos and Williamsburg The latest Meeting at Garmisch Partenkirchen in April 1984 involved 302 participants from all five continents The major emphasis of the Meeting was to blend the basic and clinical research on urolithiasis Comprehensive reviews of the major areas of current research were presented by invited speakers all internationally recognized experts in their fields From more than 250 submitted abstracts 18 were selected for oral presentation and the remainder presented at three afternoon poster sessions which provided an opportunity for informal and more lengthy discussions of the work on display The Meeting

also included three ad hoc Evening Discussions on how to approach various unsolved questions in the clinical and laboratory evaluation of stone patients and four Round Table Discussions involving specialists in the field who debated the theoretical aspects of stone formation in the urinary tract the measurement of inhibitory activity of urine the treatment of idiopathic stones with drugs and the nature and treatment of stones arising from urinary tract infection     **Biochemical Studies in Calcium Oxalate Stone Formers, with Special Reference to the Effects of Thiazide Treatment** Christer Ahlstrand,1984     **U.S. Government Research and Development Reports** ,1965     National Institutes of Health Research Grants National Institutes of Health (U.S.).
