

DISCRETE VARIABLES

DEFINITION

A discrete variable is a numerical variable that can only take on a finite number of distinct values within a given range. These values are specific, separate, and can often be counted. Unlike continuous variables, discrete variables do not allow for split values between two adjacent discrete units, which leads to their finite nature.

EXAMPLES

- **Number of visits to the doctor:** People may have differing frequencies of their health check-ups, but we can't have a 'half' or 'quarter' checkup.
- **Marital Status:** A survey may ask you for your marital status. You can be single, married, divorced, or widowed, but nothing in-between.

The Theory of Functions of a Real Variable and the Theory of Fourier's Series Ernest William Hobson, 1921 **The theory of functions of a real variable and the theory of** Ernest William Hobson, 1927 *Selected Papers in Logic and Foundations, Didactics, Economics* Karl Menger, 2012-12-06 This volume brings together those papers of mine which may be of interest not only to various specialists but also to philosophers Many of my writings in mathematics were motivated by epistemological considerations some papers originated in the critique of certain views that at one time dominated the discussions of the Vienna Circle others grew out of problems in teaching fundamental ideas of mathematics still others were occasioned by personal relations with economists Hence a wide range of subjects will be discussed epistemology logic basic concepts of pure and applied mathematics philosophical ideas resulting from geometric studies mathematical didactics and finally economics The papers also span a period of more than fifty years What unifies the various parts of the book is the spirit of searching for the clarification of basic concepts and methods and of articulating hidden ideas and tacit procedures Part 1 includes papers published about 1930 which expound an idea that Carnap after a short period of opposition in the Circle fully adopted and under the name Principle of Tolerance he eloquently formulated it in great generality in his book *Logical Syntax of Language* 1934 through which it was widely disseminated The New Logic in Chapter 1 furthermore includes the first report 1932 to a larger public of Gödel's epochal discovery presented among the great logic results of all time Chapter 2 is a translation of an often quoted 1930 paper presenting a detailed exposition and critique of intuitionism

Balasenthil, This book is written for MBA students and statistics teachers of Anna University affiliated institutions It is a natural outcome of the author after teaching statistics several times for MBA students It is shaped and reshaped several times to heal the heart and soul of non mathematical community This book covers all models in all chapters completely Problem identification is the most difficult task in statistics for the students Hence a new approach with short cuts is used throughout the book to simplify this task This book differs from other books in approaching the sampling distribution Sampling distribution chapter is usually classified based on standard error confidence interval estimation and hypothesis testing or based on the number of sample sets one sample two sample or based on the sample size large sample small sample or based on the statistical tables such as z test t test chi square test and F test But this book classifies the sampling distribution chapter based on the parameters Mean Proportion Standard deviation cum Variance Because the very first thing to be decided by any researcher or a practitioner or a decision maker before applying any statistical tool is the parameter to be used and none other The syllabus is reorganized as per the convenience of the students 2nd and 3rd unit of the syllabus is reorganized based on the parameters Mean Proportion and Standard deviation instead of standard error interval estimation and hypothesis testing Similarly the discrete distributions binomial Poisson distributions and Probability rules of 1st unit are dealt at the end Probability rules are grouped based on two models associated events and
