Variational Methods In Shape Optimization Problems:

Variationl Methods in Some Shape Optimization Problems Dorin Bucur,Giuseppe Buttazzo,2002 **Variational Methods in Shape Optimization Problems** Dorin Bucur,Giuseppe Buttazzo,2006-09-13 The fascinating eld of shape optimization problems has received a lot of attention in recent years particularly in relation to a number of applications in physics and engineering that require a focus on shapes instead of parameters or functions The goal of these applications is to deform and modify the admissible shapes in order to comply with a given cost function that needs to be optimized In this respect the problems are both classical as the isoperimetric problem and the Newton problem of the ideal aerodynamical shape show and modern re ecting the many results obtained in the last few decades The intriguing feature is that the competing objects are shapes i e domains of N R instead of functions as it usually occurs in problems of the calculus of va ations This constraint often produces additional dif culties that lead to a lack of existence of a solution and to the introduction of suitable relaxed formulations of the problem However in certain limited cases an optimal solution exists due to the special form of the cost functional and to the geometrical restrictions on the class of competing domains Variational methods in some shape optimization problems Dorin Bucur,Giuseppe Buttazzo,2002-10-01 The study of shape optimization problems is a very wide field both classical as the isoperimetric problem and Newton problem of the best aerodynamical shape show and modern for all the recent results obtained in the last two three decades The fascinating feature is that the competing objects are shapes i e domains of Rn instead of functions as usually occurs in problems of calculus of variations This constraint often produces additional difficulties that lead to a lack of existence of a solution and the introduction of suitable relaxed formulations of the problem However in a few cases an optimal solution exists due to the special form of the cost functional and to the geometrical restriction on the class of competing domains This volume collects the lecture notes of two courses given in the academic year 2000 01 by the authors at the University of Pisa and at the Scuola Normale Superiore respectively The courses were mainly addressed to Ph D students and required a background in the topics in functional analysis that are usually taught in undergraduate courses **Boundary Element Methods in Engineering** Balkrishna S. Annigeri,Kadin Tseng,2012-12-06 The Boundary Element Method BEM has become established as an effective tool for the solutions of problems in engineering science The salient features of the BEM have been well documented in the open literature and therefore will not be elaborated here The BEM research has progressed rapidly especially in the past decade and continues to evolve worldwide This Symposium was organized to provide an international forum for presentation of current research in BEM for linear and nonlinear problems in solid and fluid mechanics and related areas To this end papers on the following topics were included rotary wing aerodynamics unsteady aerodynamics design and optimization elasticity elasto dynamics and elastoplasticity fracture mechanics acoustics diffusion and wave motion thermal analysis mathematical aspects and boundary finite element coupled methods A special session was devoted to parallel vector supercomputing with emphasis on

mas sive parallelism This Symposium was sponsored by United Technologies Research Center UTRC NASA Langley Research Center and the International Association of Boundary Ele ment Methods lAB EM We thank the UTRC management for their permission to host this Symposium In particular we thank Dr Arthur S Kesten and Mr Robert E Olson for their encouragement and support We gratefully acknowledge the support of Dr E Carson Yates Jr of NASA Langley Prof Luigi Morino Dr Thomas A   **Optimal Control of Coupled Systems of Partial Differential Equations** Karl Kunisch,Günter Leugering,Jürgen Sprekels,Fredi Tröltzsch,2009-12-03 Contains contributions originating from the Conference on Optimal Control of Coupled Systems of Partial Differential Equations held at the Mathematisches Forschungsinstitut Oberwolfach in March 2008 This work covers a range of topics such as controllability optimality systems model reduction techniques and fluid structure interactions   **Optimal Design through the Sub-Relaxation Method** Pablo Pedregal,2016-09-01 This book provides a comprehensive guide to analyzing and solving optimal design problems in continuous media by means of the so called sub relaxation method Though the underlying ideas are borrowed from other more classical approaches here they are used and organized in a novel way yielding a distinct perspective on how to approach this kind of optimization problems Starting with a discussion of the background motivation the book broadly explains the sub relaxation method in general terms helping readers to grasp from the very beginning the driving idea and where the text is heading In addition to the analytical content of the method it examines practical issues like optimality and numerical approximation Though the primary focus is on the development of the method for the conductivity context the book s final two chapters explore several extensions of the method to other problems as well as formal proofs The text can be used for a graduate course in optimal design even if the method would require some familiarity with the main analytical issues associated with this type of problems This can be addressed with the help of the provided bibliography   **Numerical Methods for Free Boundary Problems** VEITTAANMÄKI,2013-11-22 About 80 participants from 16 countries attended the Conference on Numerical Methods for Free Boundary Problems held at the University of Jyviiskylii Finland July 23 27 1990 The main purpose of this conference was to provide up to date information on important directions of research in the field of free boundary problems and their numerical solutions The contributions contained in this volume cover the lectures given in the conference The invited lectures were given by H W Alt V Barbu K H Hoffmann H Mittelmann and V Rivkind In his lecture H W Alt considered a mathematical model and existence theory for non isothermal phase separations in binary systems The lecture of V Barbu was on the approximate solvability of the inverse one phase Stefan problem K H Hoff mann gave an up to date survey of several directions in free boundary problems and listed several applications but the material of his lecture is not included in this proceedings H D Mittelmann handled the stability of thermo capillary convection in float zone crystal growth V Rivkind considered numerical methods for solving coupled Navier Stokes and Stefan equations Besides of those invited lectures mentioned above there were 37 contributed papers presented We shall briefly outline the topics of the contributed papers
