Theories Of Learning:

Contemporary Theories of Learning Knud Illeris, 2018-03-27 This tenth anniversary edition of Knud Illeris's classic 2008 text is an updated and definitive collection of today's most influential learning theorists now containing additional chapters from John Hattie and Gregory Donoghue, Sharan Merriam, Gert Biesta, and Carolyn Jackson. This book brings together world-renowned experts who each present their understanding of what learning is and how human learning takes place, addressing the social, psychological, and emotional contexts of learning. In this clear and coherent overview, Professor Knud Illeris has collated chapters that explain both the complex frameworks in which learning takes place and the specific facets of learning. Each international expert provides either a seminal text or an entirely new précis of the conceptual framework they have developed over a lifetime of study, such as adult learning theory, learning strategies, and the cultural and social nature of learning processes. Elucidating the key concepts of learning, *Contemporary Theories of Learning* provides both the perfect desk reference and an ideal introduction for students; it is an invaluable resource for all researchers and academics involved in the study of learning and provides a detailed synthesis of current learning theories, all in the words of the theorists themselves.

Theories of Learning Debra McGregor, 2025-04-26 To be a successful teacher or student of education, it is crucial to acknowledge the learning process. This book explains major learning theories, how they have developed, what beliefs and evidence they have been based upon, and what they mean for teachers' practice. Key areas considered include: How different theories, including behaviourism, constructivism, cognitivism, and social-culturalism, offer alternate perspectives about learning. Detailed case studies in a range of school contexts show how theoretical considerations play out in real situations. How a deeper understanding of learning theory can enhance your professional teacher knowledge and practice. The book also includes a range of practical tasks and questions for consideration to encourage deeper reflection about teaching and learning processes. This is essential reading for anyone training to teach in primary and secondary education. Education Studies students and teachers seeking to refresh their knowledge and understanding of different perspectives of learning. Debra McGregor is Professor in Education at Oxford Brookes University.

Teaching and learning theories. Behaviorism, cognitivism, and constructivism Stephanie Reuter, 2021-11-24 Seminar paper from the year 2005 in the subject Pedagogy Theory of Science Anthropology grade 1.0 University of Münster language English abstract The paper begins with a definition of learning and learning theories. In a second part, the three learning theories: behaviourism, cognitivism, and constructivism are presented. Subsequently, the theoretical explanations are supplemented by three learning programmes whereby each learning software can be assigned to a specific learning theory. Finally, the advantages and disadvantages of the three learning theories and their applications in the classroom will be discussed. The human learning process has always been the subject of intensive scientific research as it is one of the most fascinating and at the same time complex phenomena of all. Humans are capable of learning from birth; babies, for example, learn very quickly how to communicate their needs. The powerful brain, good memory, abstract thinking, and the natural curiosity of humans underline this fact. Learning happens not only consciously, e.g. in school, but often unconsciously, e.g. language acquisition of infants. Nevertheless, not all sensory impressions are stored by the human brain; sensory perceptions are selected and evaluated. For teachers, in particular, the question arises as to how their pupils learn so that they can optimally support and accompany the learning processes. In the pedagogical discussion, three learning theories have emerged in recent decades that explain the human learning process very differently: Behaviourism, which emerged in the first half of the 20th century and still has a great influence in the scientific discussion today; cognitivism, which emerged from the criticism of behaviourism; and finally, constructivism, which increasingly found its way into the discussion in the 1990s.

Theoretical Foundations of Learning Environments David Jonassen, David H. Jonassen, Susan Land, 2014-04-08 Theoretical Foundations of Learning Environments describes the most contemporary psychological and pedagogical theories that are foundations for the conception and design

of open ended learning environments and new applications of educational technologies In the past decade the cognitive revolution of the 60s and 70s has been replaced or restructured by constructivism and its associated theories including situated sociocultural ecological everyday and distributed conceptions of cognition These theories represent a paradigm shift for educators and instructional designers to a view of learning as necessarily more social conversational and constructive than traditional transmissive views of learning Never in the history of education have so many different theories said the same things about the nature of learning and the means for supporting it At the same time although there is a remarkable amount of consonance among these theories each also provides a distinct perspective on how learning and sense making occur This book provides students faculty and instructional designers with a clear concise introduction to these theories and their implications for the design of new learning environments for schools universities and corporations It is well suited as a required or supplementary text for courses in instructional design and theory educational psychology learning theory curriculum theory and design and related areas
