Theory Of Case Based Decisions:

A Theory of Case-Based Decisions Itzhak Gilboa, David Schmeidler, 2001-07-26 This work a paradigm for modelling decision making under uncertainty describes the general theory and its relationship to planning repeated choice problems inductive inference and learning and highlights its mathematical and philosophical foundations Theory of Case-Based Decisions Itzhak Gilboa, David Schmeidler, 2001 Gilboa and Schmeidler provide a new paradigm for modelling decision making under uncertainty one which suggests that people make decisions by analogies to past cases The authors describe the general theory and its relationship to planning repeated choice problems inductive inference and learning

Case-Based Approximate Reasoning Eyke Hüllermeier, 2007-03-20 Making use of different frameworks of approximate reasoning and reasoning under uncertainty notably probabilistic and fuzzy set based techniques this book develops formal models of the above inference principle which is fundamental to CBR The case based approximate reasoning methods thus obtained especially emphasize the heuristic nature of case based inference and aspects of uncertainty in CBR *Case-Based Decision Support for Disaster Management* Möhrle, Stella, 2020-07-01 Disasters are characterized by severe disruptions of the society's functionality and adverse impacts on humans the environment and economy that cannot be coped with by society using its own resources This work presents a decision support method that identifies appropriate measures for protecting the public in the course of a nuclear accident The method particularly considers the issue of uncertainty in decision making as well as the structured integration of experience and expert knowledge **Uncertain**

Computation-based Decision Theory Rafik Aziz Aliev, 2017-12-06 Uncertain computation is a system of computation and reasoning in which the objects of computation are not values of variables but restrictions on values of variables This compendium includes uncertain computation examples based on interval arithmetic probabilistic arithmetic fuzzy arithmetic Z number arithmetic and arithmetic with geometric primitives The principal problem with the existing decision theories is that they do not have capabilities to deal with such environment Up to now no books where decision theories based on all generalizations level of information are considered Thus this self containing volume intends to overcome this gap between real world settings decisions and their formal analysis **An Experiment on Case-Based Decision Making** Brit

Grosskopf, 2008 We experimentally investigate the disposition of decision makers to use case based reasoning as suggested by Case Based Decision Theory Gilboa and Schmeidler 1995 Our subjects face a monopoly decision problem about which they have very limited information Information is presented in a manner which makes similarity judgements according to the feature matching model of Tversky 1977 very plausible In a 2x2 between subject design we vary whether information about the current market is given in addition to a history or not Furthermore we investigate the impact feedback has on behavior in several independent markets by either giving immediate feedback about obtained profits or not The results provide some support for the predictions of Case Based Decision Theory particularly when no immediate feedback is given We also find

evidence that other simple heuristics are used

Case-based Decision Theory Torsten Neher,2009 *Connectionist Approaches in Economics and Management Sciences* Cédric Lesage,Marie Cottrell,2013-03-09 Since the beginning of the 1980 s a lot of new approaches of biomimetic inspiration have been defined and developed for imitating the brain behavior for modeling non linear phenomenon for providing new hardware architectures for solving hard problems They are named Neural Networks Multilayer Perceptrons Genetic algorithms Cellular Automates Self Organizing maps Fuzzy Logic etc They can be summarized by the word of Connectionism and consist of an interdisciplinary domain between neuroscience cognitive science and engineering First they were applied in computer sciences engineering biological models pattern recognition motor control learning algorithms etc But rapidly it appeared that these methods could be of great interest in the fields of Economics and Management Sciences The main difficulty was the distance between researchers the difference in the vocabulary used by the ones and the others their basic background The main notions used by these new techniques were not familiar to the Social and Human Sciences researchers What are they Four of them are now very briefly introduced but the reader will find more information in the following chapters

Making Better Decisions Itzhak Gilboa,2010-10-19 Making Better Decisions introduces readers to some of the principal aspects of decision theory and examines how these might lead us to make better decisions Introduces readers to key aspects of decision theory and examines how they might help us make better decisions Presentation of material encourages readers to imagine a situation and make a decision or a judgment Offers a broad coverage of the subject including major insights from several sub disciplines microeconomic theory decision theory game theory social choice statistics psychology and philosophy Explains these insights informally in a language that has minimal mathematical notation or jargon even when describing and interpreting mathematical theorems Critically assesses the theory presented within the text as well as some of its critiques Includes a web resource for teachers and students

Goal-Directed Decision Making Richard W. Morris,Aaron Bornstein,Amitai Shenhav,2018-08-23 Goal Directed Decision Making Computations and Neural Circuits examines the role of goal directed choice It begins with an examination of the computations performed by associated circuits but then moves on to in depth examinations on how goal directed learning interacts with other forms of choice and response selection This is the only book that embraces the multidisciplinary nature of this area of decision making integrating our knowledge of goal directed decision making from basic computational clinical and ethology research into a single resource that is invaluable for neuroscientists psychologists and computer scientists alike The book presents discussions on the broader field of decision making and how it has expanded to incorporate ideas related to flexible behaviors such as cognitive control economic choice and Bayesian inference as well as the influences that motivation context and cues have on behavior and decision making Details the neural circuits functionally involved in goal directed decision making and the computations these circuits perform Discusses changes in goal directed decision making spurred by development and disorders and within real world applications including social contexts and addiction

Synthesizes neuroscience psychology and computer science research to offer a unique perspective on the central and emerging issues in goal directed decision making **Theory of Decision under Uncertainty** Itzhak Gilboa,2009-03-16

This book describes the classical axiomatic theories of decision under uncertainty as well as critiques thereof and alternative theories It focuses on the meaning of probability discussing some definitions and surveying their scope of applicability The behavioral definition of subjective probability serves as a way to present the classical theories culminating in Savage s theorem The limitations of this result as a definition of probability lead to two directions first similar behavioral definitions of more general theories such as non additive probabilities and multiple priors and second cognitive derivations based on case based techniques **Case-based Decision Theory** Itzhak Gilboa,1992 *The Contribution of "case-based Decision Theory" to the Theory of Choice Under Uncertainty* Emilio Asaro,University of Manchester. School of Economic Studies,1998

Utility in Case-based Decision Theory Itzhak Gilboa,David Schmeidler,Peter P. Wakker,Ohio State University. Department of Economics,2000 **Applying Decision Theory in Case-based Reasoning** Hsin-Yen Wei,1992

Case-Based Decision Theory and Financial Markets ,2004 The dissertation applies the case based decision theory proposed by Gilboa and Schmeidler 1995 to financial markets It considers both an individual portfolio choice problem and interaction of case based investors in a market environment It is shown that case based decisions can explain empirically observed phenomena such as predictability of returns excessive volatility bubbles and high frequency of trades Moreover it can be shown that case based investors can survive in the presence of expected utility maximizers in the market and can influence asset prices A Digest of the Decisions of the Supreme Court of Arkansas from 1837 to 1917 Thomas Dwight Crawford,1917 *Digest of the Decisions of the Supreme Court of Washington: Abandonment-Household goods* Arthur Remington,1907 Reports Containing the Cases Determined in All the Circuits from the Organization of the Courts ,1912
