increases reusability as developers do not have to recreate software frameworks and libraries in the language they develop in and can reuse existing software instead However developers often have a broad choice with regard to tools some of which are designed for only one specific programming language Various Integrated Development Environments have support for multiple languages but are usually unable to provide a consistent programming experience due to different features of language runtimes Furthermore common mechanisms that allow reuse of software written in other languages usually use the operating system or a network connection as the abstract layer Tools however often cannot support such indirections well and are therefore less useful in debugging scenarios for example In this report we present a novel approach that aims to improve the programming experience with regard to working with multiple high level programming languages As part of this approach we reuse the tools of a Smalltalk programming environment for other languages and build a multi language virtual execution environment which is able to provide the same runtime capabilities for all languages The prototype system Squimera is an implementation of our approach and demonstrates that it is possible to reuse development tools so that they behave in the same way across all supported programming languages In addition it provides convenient means to reuse and even mix software libraries and frameworks written in different languages without breaking the debugging experience
