Visualizing Abstract Objects And Relations:

Visualizing Abstract Objects And Relations Tomihisa Kamada, 1989-09-01 Pictorial representations are very useful for humans to understand complicated relations or structures This is the reason that the user interface of information systems is strongly required to visualize many kinds of information in a wide variety of graphical forms At present however only some very specialized visualization techniques have been developed probably because the generality in the visualization has not been appreciated correctly This book presents a visualization framework for translating abstract objects and relations typically represented in textual forms into pictorial representations and describes a general visualization interface based on this framework In the framework abstract objects and relations are mapped to graphical objects and relations by user defined mapping rules The declarative nature of the mapping rules provides users with more global and more flexible layout capabilities Also presented is an algorithm for drawing general undirected graphs which can be used to visualize network structures as network diagrams The proposed visualization framework is shown to be general enough to be applied to various types of visualization problems such as the visualization of semantics of natural language sentences the generation of diagrams for data structures and program structures and the drawing of database schema Examples of all these problems are shown with actual mapping rules and pictorial results

Multivariate Network Visualization Andreas Kerren, Helen Purchase, Matthew O. Ward, 2014-04-15 This book is the outcome of the Dagstuhl Seminar 13201 on Information Visualization Towards Multivariate Network Visualization held in Dagstuhl Castle Germany in May 2013 The goal of this Dagstuhl Seminar was to bring together theoreticians and practitioners from Information Visualization HCI and Graph Drawing with a special focus on multivariate network visualization i e on graphs where the nodes and or edges have additional multidimensional attributes The integration of

multivariate data into complex networks and their visual analysis is one of the big challenges not only in visualization but also in many application areas Thus in order to support discussions related to the visualization of real world data also invited researchers from selected application areas especially bioinformatics social sciences and software engineering The unique Dagstuhl climate ensured an open and undisturbed atmosphere to discuss the state of the art new directions and open challenges of multivariate network visualization **UIST** ,2001 *Information Visualization* Colin Ware,2019-12-19
