The Bilingual Child Virginia Yip, Stephen Matthews, 2007-08-27 How does a child become bilingual The answer to this
intriguing question remains largely a mystery not least because it has been far less extensively researched than the process
of mastering a first language Drawing on new studies of children exposed to two languages from birth English and Cantonese
this book demonstrates how childhood bilingualism develops naturally in response to the two languages in the children s
environment While each bilingual child s profile is unique the children studied are shown to develop quite differently from
monolingual children The authors demonstrate significant interactions between the children s developing grammars as well
as the important role played by language dominance in their bilingual development Based on original research and using
findings from the largest available multimedia bilingual corpus the book will be welcomed by students and scholars working
