Veiled Reality

Joseph E. Brenner, Abir U. Igamberdiev

Veiled Reality:

Veiled Reality Bernard D'espagnat, 1995-01-20 By questioning the validity of some of our basic concepts such as space object and causality quantum physics contributes quite decisively to the dramatic changes now taking place in our world picture Veiled Reality provides a detailed view of the reasons why such a questioning arises a survey of the corresponding conceptual and theoretical problems and a comprehensive up to date account useful to scientists and epistemologists alike of the various ways present day physicists tackle these problems The book deals with the E P R reality criterion local causality and quantum measurement including relativistic quantum collapse decoherence theories consistent histories approaches and ontologically interpretable theories Questions bearing on the connection between counterfactuality and realism intersubjective agreement and limits of the bearing of the verbs to have and to be follow naturally from the analysis and are thoroughly examined Finally distinguishing between empirical reality and a veiled independent reality whose only knowable features are structural yields a clue to a plausible interpretation of current physics Accessible to readers with only very elementary background in modern physics Veiled Reality offers nonspecialists including students in physics and philosophy easy access to basic problems in the foundation of physics

Philosophy in Reality Joseph E. Brenner, Abir U.

Igamberdiev, 2020-11-30 Philosophy in Reality offers a new vision of the relation between science and philosophy in the framework of a non propositional logic of real processes grounded in the physics of the real world This logical system is based on the work of the Franco Romanian thinker St phane Lupasco 1900 1988 previously presented by Joseph Brenner in the book Logic in Reality Springer 2008 The present book was inspired in part by the ancient Chinese Book of Changes I Ching and its scientific philosophical discussion of change The emphasis in Philosophy in Reality is on the recovery of dialectics and semantics from reductionist applications and their incorporation into a new synthetic paradigm for knowledge Through an original re interpretation of both classical and modern Western thought this book addresses philosophical issues in scientific fields as well as long standing conceptual problems such as the origin nature and role of meaning the unity of knowledge and the origin of morality In a rigorous transdisciplinary manner it discusses foundational and current issues in the physical sciences mathematics information communication and systems theory and their implications for philosophy The same framework is applied to problems of the origins of society the transformation of reality by human subjects and the emergence of a global sustainable information society In summary Philosophy in Reality provides a wealth of new perspectives and references supporting research by both philosophers and physical and social scientists concerned with the many facets of reality

Reality and the Physicist Bernard D'Espagnat, 1989-01-27

This book investigates the nature of reality from the viewpoint of a physicist

Foundations Of Modern Physics 1992 - Proceedings Of The Symposium K

V Laurikainen, Claus Montonen, 1993-03-27 The lectures focus on the relevance of the Copenhagen interpretation today and on the philosophy of Wolfgang Pauli

Logic in Reality JOSEPH BRENNER, 2008-05-20 This book is both dif cult and

rewarding affording a new perspective on logic and reality basically seen in terms of change and stability being and becoming Most importantly it exemplifies a mode of doing philosophy of science that seems a welcome departure from the traditional focus on purely analytic arguments The author approaches ontology metaphysics and logic as having offered a number of ways of constructing the description of reality and aims at deepening their relationships in a new way Going beyond the mere abstract and formal aspects of logical analysis he offers a new architecture of logic that sees it as applied not only to the reasoning processes belonging to the first disciplinary group ontology but also directly concerned with events and phenomena studied by the second one metaphysics It is the task of the book to elaborate such a constructive logic both by offering a local view of the structure of the reality in general and by proffering a wealth of models able to encompass its implications for science In turning from the merely formal to the constructive account of logic Brenner overcomes the limitation of logic to linguistic concepts so that it can be not only a logic of reality but also in that reality which is constitutively characterized by a number of fundamental dualities observer and observed self and not self internal and external etc Mathematical Undecidability, Quantum Nonlocality and the Question of the Existence of God A.

Driessen, Antoine Suarez, 2012-12-06 On January 22 1990 the late John Bell held at CERN European Laboratory for Particle Physics Geneva a seminar organized by the Center of Quantum Philosophy that at this time was an association of scientists interested in the interpretation of quantum mechanics In this seminar Bell presented once again his famous theorem Thereafter a discussion took place in which not only physical but also highly speculative epistemological and philosophical questions were vividly debated The list of topics included assumption of free will in Bell's theorem the understanding of mind the relationship between the mathematical and the physical world the existence of unobservable causes and the limits of human knowledge in mathematics and physics Encouraged by this stimulating discussion some of the participants decided to found an Institute for Interdisciplinary Studies IIS to promote philosophical and interdisciplinary reflection on the advances of science Meanwhile the IIS has associated its activities with the Swiss foundation Fondation du Lemman and the Dutch foundation Stichting Instudo registered in Geneva and Amsterdam respectively With its activities the IIS intends to strengthen the unity between the professional activities in science and the reflection on fundamental philosophical questions In addition the interdisciplinary approach is expected to give a contribution to the progress of science and the socio-economic development At present three working groups are active within the IIS i.e. the Center for Quantum Philosophy the Wealth Creation and Sustainable Development Group the Neural Science Group **Symposium On The Foundations Of Modern Physics 1987 - The Copenhagen Interpretation 60 Years After The Como Lecture** Pekka Lahti, Peter Mittelstaedt, 1988-02-01 **Do We Really Understand Quantum Mechanics?** Franck Laloë, 2019-02-14 Quantum mechanics is a fantastically successful theory that has impacted on many areas of physics from pure theory to applications However it is difficult to interpret and philosophical contradictions and counter intuitive results are apparent at a

fundamental level In this book Lalo presents our current understanding of the theory **The Individual and Reality**

 Clarke,1996 The author argues that the picture of the world constructed by traditional science a collection of particles
 rushing through the void is no more than one particular model of the universe In our century a radically new way of looking
 at reality has been opened up by quantum theory with its image of humanity in dialogue with nature *Hearst's*
