The Long Fuse:

The Long Fuse Laurence Lafore,1997-05-15 In analyzing the causes of World War I without concern for the question of guilt the author places emphasis on two central facts first that when statesmen and peoples took actions they knew might lead to war they were not envisaging the catastrophe that the war became but rather a quick and limited war and second that among the many conflicts that might have led to war the one that did was the threat to the integrity of Austria Hungary posed by Serbia and Serb nationalism

The Long Fuse. An Interpretation to the Origins of World War I.... Laurence Lafore,1966 *Long Fuse, Big Bang* Eric Haseltine,2010-07-20 If I had asked people what they wanted they would have said faster horses Henry Ford As one part of your brain processes these words another part of your brain is urging you to put the book down and focus on something more pressing Get back to work on the budget due tomorrow Answer e mails growing stale in your inbox Get off your rear and update that r m br We re all guilty of it especially in the business world From Fortune 500 CEOs to assistants we work to solve the most urgent problems first That s because evolution has hardwired our brains to focus only on the immediate future a survival technique that worked extremely well when predators were lurking at every turn But that was then this is now In the modern world where life expectancies are long and physical perils rare at least for people who buy books it s not only possible to build a strong tomorrow without sacrificing today but to actually increase the number of here and now victories by pursuing distant wins That s where Long Fuse Big Bang comes in to help you work with that instinct to create and foster ideas that will lead to explosive professional results Through proven case studies and personal experience Dr Eric Haseltine shows you how to neutralize the quick fix way of thinking and actually use that desire to improve your chances of an enduring success Rather than fight our most basic thought processes this book will teach you how to work with your brain to light the long fuse keep it smoldering and ignite that Big Bang that will make history

Timetrees: Incorporating Fossils and Molecules, 2nd edition Michel Laurin,Gilles Didier,Rachel C. M. Warnock,2022-09-15 Calibrating phylogenies to time is central to addressing many questions in evolutionary biology and macroevolution The fossil record once provided our only source for establishing a timeline for evolution However the incompleteness of the fossil record and the non uniformity of fossil recovery rate make it challenging to obtain precise estimates of divergence times from fossil evidence alone Molecular dating which combines evidence from the geological and molecular records enables us to generate a much more complete and precise timeline of

events The molecular clock can be time calibrated using temporal evidence from fossils and used to estimate divergence times based on the assumption that the rate of sequence evolution will be approximately constant over time and among lineages Methodological challenges to applying this concept in practice have been to relax the assumption of constant evolutionary rates and to model the uncertainty associated with paleontological and geological calibrations To this end available statistical methods have become increasingly complex in order to capture key features of empirical data These are typically applied using Bayesian inference which provides a powerful framework for incorporating multiple sources of uncertainty Although overall more effort has been expended in developing models of molecular sequence evolution critical advances have also included approaches to modeling taxonomic diversification and fossilization In particular recent advances in birth death process models have allowed for continuous sampling along lineages enabling more information from the fossil record to be incorporated into dating analyses in a statistically coherent way In addition available dating methods can now be applied to scenarios in which no molecular data may be available allowing for novel insights into the evolution of entirely extinct clades Other recent innovations enable us to date divergence times among taxa that have no fossil record including the use of gene duplication events or biogeographic evidence Furthermore time calibrated trees are necessary for obtaining phylogenetic estimates of taxonomic diversification and extinction rates which can now be jointly inferred along with lineage divergence times These approaches offer an exciting opportunity to understand the evolution of life in deep time although key challenges remain especially with regards to modeling the processes of genome evolution taxonomic diversification and fossil recovery In this Research Topic we focus on recent advances in methodology outstanding challenges and the application of molecular and paleontological dating methods to empirical case studies across the Tree of Life
