Social Learning Imitation:

Social Learning and Imitation Neal Elgar Miller, John Dollard, 1962 *Imitation and Social Learning in Robots, Humans and Animals* Christopher L. Nehaniv, Kerstin Dautenhahn, 2009-04-09 Mechanisms of imitation and social matching play a fundamental role in development communication interaction learning and culture Their investigation in different agents animals humans and robots has significantly influenced our understanding of the nature and origins of social intelligence Whilst such issues have traditionally been studied in areas such as psychology biology and ethnology it has become increasingly recognised that a constructive approach towards imitation and social learning via the synthesis of artificial agents can provide important insights into mechanisms and create artefacts that can be instructed and taught by imitation demonstration and social interaction rather than by explicit programming This book studies increasingly sophisticated models and mechanisms of social matching behaviour and marks an important step towards the development of an interdisciplinary research field consolidating and providing a valuable reference for the increasing number of researchers in the field of imitation and social learning in robots humans and animals

Bounded Rationality Gerd Gigerenzer, Reinhard Selten, 2002-07-26 In a complex and uncertain world humans and animals make decisions under the constraints of limited knowledge resources and time Yet models of rational decision making in economics cognitive science biology and other fields largely ignore these real constraints and instead assume agents with perfect information and unlimited time About forty years ago Herbert Simon challenged this view with his notion of bounded rationality Today bounded rationality has become a fashionable term used for disparate views of reasoning This book promotes bounded rationality as the key to understanding how real people make decisions Using the concept of an adaptive toolbox a repertoire of fast and frugal rules for decision making under uncertainty it attempts to impose more order and coherence on the idea of bounded rationality The contributors view bounded rationality neither as optimization under constraints nor as the study of people's reasoning fallacies The strategies in the adaptive toolbox dispense with optimization and for the most part with calculations of probabilities and utilities The book extends the concept of bounded rationality from cognitive tools to emotions it analyzes social norms imitation and other cultural tools as rational strategies and it shows how smart heuristics can exploit the structure of environments

Media and Suicide Thomas Niederkrotenthaler, Steven Stack, 2017-07-28 Somewhere in the world in the next forty seconds a person is going to commit suicide Globally suicides account for 50 percent of all violent deaths among men and 71 percent for women Despite suicide prevention programs therapy and pharmacological treatments the suicide rate is either increasing or remaining high around the world Media and Suicide holds traditional and emergent media accountable for influencing an individual's decision to commit suicide Global experts present research historical analysis theoretical disputes including discussion on the Werther and Papageno effects and policy regarding the media's impact on suicide They answer questions about the effects of different types of media and storytelling

show how the impact of social media can be diminished discuss internet bullying mass shootings and mass suicides show the effects of recovery stories and much more The editors also present examples of suicide policy in the United States Switzerland the United Kingdom Ireland and Hong Kong on how to best communicate reporting guidelines to decrease the copycat effect especially in less developed nations where most of the world s nearly one million suicides occur each year Although there is much work to be done to prevent media influenced suicide this innovative volume will contribute a large piece to this complex puzzle

Social Learning In Animals Cecilia M. Heyes, Bennett G. Galef Jr., 1996-05-23 The increasing realization among behaviorists and psychologists is that many animals learn by observation as members of social systems Such settings contribute to the formation of culture This book combines the knowledge of two groups of scientists with different backgrounds to establish a working consensus for future research The book is divided into two major sections with contributions by a well known international and interdisciplinary team which integrates these growing areas of inquiry Integrates the broad range of scientific approaches being used in the studies of social learning and imitation and society and culture Provides an introduction to this field of study as well as a starting point for the more experienced researcher Chapters are succinct reviews of innovative discoveries and progress made during the past decade Includes statements of varied theoretical perspectives on controversial topics Authoritative contributions by an international team of leading researchers
