Structure Of Time

Patricia Cohen, Jacob Cohen

Structure Of Time:

The Structure of Time W. H. Newton-Smith, 2018-10-10 Originally published in 1980 What is time How is its structure determined The enduring controversy about the nature and structure of time has traditionally been a diametrical argument between those who see time as a container into which events are placed and those for whom time cannot exist without events This controversy between the absolutist and the relativist theories of time is a central theme of this study The author's impressive arguments provide grounds for rejecting both these theories firstly by establishing that empty time is possible and secondly by showing through a discussion of the structure of time which involves considering whether time might be cyclical branching beginning or non beginning that the absolutist theory of time is untenable This book then advances two new theories and succeeds in shifting the traditional debate about time to a consideration of time as a theoretical structure and as a theoretical framework

The Structure of Time Vyvyan Evans, 2004-03-05 One of the most enigmatic aspects of experience concerns time Since pre Socratic times scholars have speculated about the nature of time asking questions such as What is time Where does it come from Where does it go The central proposal of The Structure of Time is that time at base constitutes a phenomenologically real experience Drawing on findings in psychology neuroscience and utilising the perspective of cognitive linguistics this work argues that our experience of time may ultimately derive from perceptual processes which in turn enable us to perceive events As such temporal experience is a pre requisite for abilities such as event perception and comparison rather than an abstraction based on such phenomena The book represents an examination of the nature of temporal cognition with two foci i an investigation into pre conceptual temporal experience and ii an analysis of temporal structure at the conceptual level which derives from temporal experience

Space, Time, and Stuff Frank Arntzenius, Cian Seán Dorr, 2012-01-19 Frank Arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure He argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist

Time: Its Structure and Role in Physical Theories P.A. Kroes, 2012-12-06 This book on the structure and role of time in physical theories addresses itself to scientists and philosophers interested in the no man's land between science and philosophy in particular between physics and philosophy The point of departure is physical time Let time as used by physicists in their theories but the analysis is not confined to a purely physical level but carries the problem into the domain of philosophical inquiry Although the book presupposes some knowledge of physics I have avoided wherever possible the use of advanced mathematics and technical details Of all the people who have been of help in writing this book I would first of all like to mention Paul Scheurer and Guy Debrock who were my primary mentors in science and philosophy This strictly is a revision of my dissertation Kroes 1982a which I wrote under the stimulating guidance of Scheurer many of the ideas exposed here have their origin in his work and

were developed in frequent discussions with him Guy Debrock not only stimulated my interest in philosophy but also made valuable suggestions Without any overstatement I dare say that without their assistance this book would never have been written Furthermore I would like to thank D Dieks J J C

Life Values and Adolescent Mental Health Patricia Cohen, Jacob Cohen, 2013-05-13 Arising from the Cohens work on the epidemiology of childhood psychopathology this book explores the two aspects of motivational structure ideas and values that underlie the development of maladaptive functioning and symptoms The first aspect is a measure of what children admire in their peers this measure is seen as an operationalization of personal ideals The second is a measure of life goals seen as a representation of the contemporary structure of long term personal values Despite the considerable amount of attention given in the popular press and among social critics and politicians values have been relatively neglected as a topic of empirical research in this country To fill the void this work uses data from a large cohort of young people who have been studied longitudinally since early childhood to elucidate three aspects of life goals and values What are the demographic family peer school and intrapersonal influences that shape values and life goals of adolescents How do they change over the course of adolescence What impact do these values have on the lives of adolescents and young adults Decisions about what we find most admirable and which of the many apparently good things in life we will take on as our top priorities are consequential both for the contemporary and for the future emotional and behavioral well being of the individual Thus this book explores systematically the environmental origins of ideals and values using deprivation and attainment hypotheses to

examine a variety of influences on the development of differences in values This book also examines the relationship between the measures of children s values and psychopathology examining both the Axis 1 diagnosis including disruptive behavior disorders depression and anxiety and the Axis 2 personality disorders Providing an extensive study of the life values of adolescents and the state of their mental health this monograph will be of interest to developmental psychologists
