Lipsky,Robert Rothlein,Takashi K. Kishimoto,Ronald B. Faanes,C.Wayne Smith,2012-12-06 Leukocyte adhesion molecules have been the subject of intense basic and preclinical research Results from clinical trials obtained sofar with antibodies directed towards these surface proteins offer promise for the prevention of graft rejection and effective treatment of acute and chronic inflammatory disease This volume presents a comprehensive review of contemporary research on the structure function and regulation of leukocyte adhesion molecules and their ligands from the molecular to the clinical level The blend of basic science and clinical applications presented in Structure Function and Regulation of Molecules Involved in Leukocyte Adhesion provides clear evidence of the biological importance of cell cell interactions and the many potential clinical dividends afforded by understanding the molecular basis of cell adhesion It will appeal to a broad range of readers in immunology and cell biology      **Biomedical Index to PHS-supported Research** ,1988      *Biomedical Index to PHS-supported Research: pt. Walker,Angela M. Roberts,1997-05-05 There is now considerable evidence that environmental and social changes including increased urbanisation industrialisation air pollution and large scale arable monoculture have combined to produce an increase in the incidence of various allergies It is currently estimated that more than 1 in 10 individuals are afflicted with some form of allergy which although generally not life threatening cause varying levels of discomfort or debilitation IgE mediated hypersensitivities such as seasonal allergic rhinitis hayfever eczema urticaria and asthma consequently represent considerable medical and socio economic problems To date the clinical management of allergy relies largely either on allergen avoidance and or long term use of pharmacological agents e g steroids and antihistamines However a mass of molecular and cellular immunobiological research has accumulated which provides further insights into the precise mechanisms determining IgE production coupled with exciting possibilities for immunotherapeutic intervention Allergic Mechanisms and Immunotherapeutic Strategies has drawn together contributions from leading scientific and medical researchers in this field The topics discussed include the structural basis of the interaction of human IgE with its receptors the role of recombinant DNA methodologies in the analysis of common plant pollen and mite allergens and the modulation of the allergic cascade by T cells and cytokines In addition to summarising the most important discoveries in their respective

areas the contributors have illustrated where their findings could be exploited for the development of immunotherapeutic strategies Given that the incidence of allergic disease is increasing it seems likely that such strategies will have an important role in future clinical management of atopic patients **Cancer Immunology, Immunotherapy**, 1992 **Clinical**
