*Beyond Timbuktu* Ousmane Oumar Kane, 2016-06-07 Timbuktu is famous as a center of learning from Islam's Golden Age. Yet it was one among many scholarly centers to exist in precolonial West Africa. Ousmane Kane charts the rise of Muslim learning in West Africa from the beginning of Islam to the present day and corrects lingering misconceptions about Africa's Muslim heritage and its influence

*The Present and Future of Immunology Education* Andrea Bottaro, Deborah M. Brown, John Gregory Frelinger, 2022-01-24 The explosion of basic and applied immunology in the first decades of the 21st century has brought forth new opportunities and challenges for immunology education at all academic levels from professional to undergraduate, medical graduate, and post graduate instruction. Moreover, developing methods and techniques for educating general audiences on the importance and benefits of immunology will be critical for increasing public awareness and support. One major immediate challenge consists in accommodating within the confines of traditional immunology curricula a body of knowledge that continues to grow exponentially in both size and complexity. Furthermore, the practical toolbox of immunological research has vastly expanded and even in the present environment of highly interdisciplinary and collaborative science, future immunologists will likely need to be at least conversant in, for instance, computational, structural, and system biology, nanotechnology, and tissue engineering. At the same time, our perspective of the immune system has progressively developed from primarily a host defense mechanism to a fundamental homeostatic system with organism-wide physiological and clinical significance and with potentially transformative biotechnological and therapeutic applications. As a consequence, in addition to stand-alone courses, immunology is increasingly integrated into other courses or distributed longitudinally throughout a multi-year curriculum. This necessitates interdisciplinary approaches to reach an expanding range of disciplines as diverse as neurobiology, cancer biology, oncology, infectious diseases, pharmacology, orthopedics, and bioengineering. Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of one-size-fits-all instruction and to tailor level and discipline-appropriate content to different types of students using multiple teaching formats. Finally, like most other disciplines, immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are digital natives, comfortable with, and expect on demand, multi-modal learning, diversified sources, and active engagement. Thankfully, the dynamic and interactive behavior of immune system cells, now visualized with striking immediacy by in vivo imaging, has the ability to capture and hold the interest of even the most jaded learner. The need for an increasingly immunology-knowledgeable workforce, not just

academic and industry scientists but also clinical and research lab technicians biomedical engineers and physicians in a growing array of specialties will also expand job opportunities for immunologists as educators and for content creators dedicated to generating new didactic tools in this field Acknowledgement We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies IUIS *Reimagining Education: Studies and Stories for Effective Learning in an Evolving Digital Environment* Deborah Cockerham, Regina Kaplan-Rakowski, Wellesley Foshay, Michael J. Spector, 2023-05-30 Technology has developed at a tremendous rate since the turn of the century but educational practice has not kept pace Traditional teaching practices still predominate in many educational settings and educators are often intimidated by new technology However as tragic as the COVID 19 pandemic has been it has caused many people to rethink education and opportunities provided by new technologies for effective teaching and learning How can educational communities of practice be reimagined to support a growth mindset for learning This volume explores innovative visions for 21st century learning The content explores the experiences of teachers with new technology presents research studies that highlight effective strategies and technologies and shares lessons learned from a unique researcher practitioner mentoring model Educational approaches that worked well challenges that were difficult to overcome and potential benefits of effective technology integration will encourage readers to reimagine education and implement practices that can strengthen the future of online education **The British National Bibliography** Arthur James Wells, 2007
