Principles of Terrestrial Ecosystem Ecology F Stuart Chapin III, Pamela A. Matson, Peter Vitousek, 2011-09-02 Ecosystem ecology regards living organisms including people and the elements of their environment as components of a single integrated system The comprehensive coverage in this textbook examines the central processes at work in terrestrial ecosystems including their freshwater components It traces the flow of energy water carbon and nutrients from their abiotic origins to their cycles through plants animals and decomposer organisms As well as detailing the processes themselves the book goes further to integrate them at various scales of magnitude those of the ecosystem the wider landscape and the globe It synthesizes recent advances in ecology with established and emerging ecosystem theory to offer a wide ranging survey of ecosystem patterns and processes in our terrestrial environment Featuring review questions at the end of each chapter suggestions for further reading and a glossary of ecological terms Principles of Terrestrial Ecosystem Ecology is a vitally relevant text suitable for study in all courses in ecosystem ecology Resource managers and researchers in many fields will welcome its thorough presentation of ecosystem essentials

Biodiversity and Terrestrial Ecosystems Jingyi Peng, Changhong Zhou, 1994

Terrestrial Ecosystems Through Time Anna K. Behrensmeyer, 1992-08-15 Breathtaking in scope this is the first survey of the entire ecological history of life on land from the earliest traces of terrestrial organisms over 400 million years ago to the beginning of human agriculture By providing myriad insights into the unique ecological information contained in the fossil record it establishes a new and ambitious basis for the study of evolutionary paleoecology of land ecosystems A joint undertaking of the Evolution of Terrestrial Ecosystems Consortium at the National Museum of Natural History Smithsonian Institution and twenty six additional researchers this book begins with four chapters that lay out the theoretical background and methodology of the science of evolutionary paleoecology Included are a comprehensive review of the taphonomy and paleoenvironmental settings of fossil deposits as well as guidelines for developing ecological characterizations of extinct organisms and the communities in which they lived The remaining three chapters treat the history of terrestrial ecosystems through geological time emphasizing how ecological interactions have changed the rate and tempo of ecosystem change the role of exogenous

forcing factors in generating ecological change and the effect of ecological factors on the evolution of biological diversity The six principal authors of this volume are all associated with the Evolution of Terrestrial Ecosystems program at the National Museum of Natural History Smithsonian Institution

Water and Carbon Dynamics, Ecosystem Stability of Forest and Grassland in Response to Climate Change Xiaoming Kang, Shoujia Sun, Fenghui Yuan, Xianjin Zhu, Xiaojuan Tong, Hui Huang, 2024-04-15 Forest and grassland ecosystems are the most important carbon sinks in terrestrial ecosystems They can maintain or enhance carbon stocks and sinks in biomass and play vital roles in mitigating climate change China is taking action to achieve its carbon peak and carbon neutral targets Climate change particularly the increase in the frequency severity and extent of drought will affect the stability of the forest and grassland How forests and grassland mitigate and adapt to climate change is still a challenge Exploring the response of the forest and grassland to extreme climate events contributes to improving vegetation quality and enhancing the ability to respond to climate change

Terrestrial Ecosystem Ecology Göran I. Ågren, Folke O. Andersson, 2011-12-15 Human activities impact the environment and modify the cycles of important elements such as carbon and nitrogen from local to global scales In order to maintain long term and sustainable use of the world's natural resources it is important that we understand how and why ecosystems respond to such changes This book explains the structure and functioning of terrestrial ecosystems using examples ranging from the Arctic to the tropics to demonstrate how they react under differing conditions This knowledge is developed into a set of principles that can be used as starting points for analysing questions about ecosystem behaviour Ecosystem dynamics are also considered illustrating how ecosystems develop and change over a range of temporal and spatial scales and how they react to perturbations whether natural or man made Throughout the book descriptive studies are merged with simple mathematical models to reinforce the concepts discussed and aid the development of predictive tools
