Principles and Practice of Testing in Construction Clive Cockerton,David Doran,2006-05 Testing is a vital tool for the construction industry which is constantly faced with the demands of quality durability and cost effectiveness Testing programmes ensure that materials will perform to their design requirements There is an increasing demand for standard and non standard tests for materials and structures However the planning implementation and operation of a testing programme together with the collection and interpretation of data is no simple task It is essential that the programme is established to provide answers to relevant questions and when the data has been analysed that the correct action has been taken This series will deal with all materials of any import in construction By building on a broad base it will be possible for the reader to extract information on a specific topic or to gain a general appreciation of the requirements in testing programmes A most useful part of these volumes will be to identify the tests and indicate where they might be used or not as the case may be This first volume is an introduction to the subject presenting information and guidance which is also applicable to all subsequent volumes In addition to a brief history of the subject the authors deal with issues of fundamental importance including laboratory planning quality control and handling data As a stand alone volume it presents a concise appreciation of this important aspect of construction as part of the series it forms the foundation of a valuable guide to good practice
