**Authorship attribution in Turkish Texts** Hülya Kocagül Yüzer, 2022-12-31 The latest developments in the field of computer technology have created new ways to share information without time and space limits Computer technologies have not only made life easier and more accessible for users but they have also opened up a new arena for illegal activities These illegal actions have found an opportunity to spread via e mails websites Internet chat rooms forum pages and social networking websites like Facebook Twitter Instagram Online contributors do not need to provide information such as their real names the city where they live age or gender in order to share their opinions and such feelings of anonymity encourage criminal activities Thus disputed authorship cases have become one of the main challenges of the technological era This research is a corpus based simulated authorship casework application in Turkish Texts for the corpora were collected from a collaborative online encyclopaedia Eksi Sozluk Sour Times and Twitter The corpus consists of 900 texts from 52 authors in total However 105 texts belong to seven authors from Twitter The two methodological approaches that were applied are qualitative and statistical methods according to Grant s 2013 approach Ten different tests were applied depending on the various parameters that are forensically possible in real world cases Accordingly the role of feature type size including the candidate author size text size and a limited number of texts per author and finally cross genre application were tested The analyses revealed that such a combined approach has promising results in some tests in that they attributed authorship in Turkish The findings of the research indicated that there is the potential to attribute unknown authors in Turkish and it appears that the results have significant conclusions for the broader application of forensic authorship attribution techniques in Turkish texts

**Abstract Entity Anaphora in Argumentative Texts** Donghong Liu, 2023-08-21 This book focuses on abstract entity anaphora in argumentative texts with Asher s 1993 Segmented Discourse Representation Theory SDRT as the theoretical framework investigating its pragmatic features and exploring its referent interpretation The data sources include more than 160 000 word argumentative texts 80 000 word English texts and 80 000 word Chinese ones selected from newspapers journals and books in China and America At first a comparative study was done between Chinese and English argumentative texts so as to compare the pragmatic features of abstract entity anaphora in the two languages Then referent interpretation is explored within the SDRT framework Although SDRT can account for most of the instances of abstract entity anaphora it appears incompetent in

dealing with some phenomena in the data of our study Seven problems in SDRT were found and corresponding solutions were proposed in an attempt to improve this theory In general this book has three aspects of significance Firstly it establishes abstract entity anaphora as an independent and a special kind of anaphora Secondly the research methods are the combination of empirical study and theoretical hypotheses as well as the coalescent of dynamic study and static study Thirdly the book is not limited to the application of SDRT to Mandarin Chinese and backward anaphora Instead based on the linguistic phenomena in the data it challenges and improves the theory and it even negates some aspects and meanwhile brings forward new solutions
