Statistical Methods in Cryptanalysis Solomon Kullback,1976 Statistical Methods in Cryptanalysis Solomon Kullback,United States. Army. Signal Corps,United States. War Department,1935 Probabilistic and Statistical Methods in Cryptology Daniel Neuenchwander,2004-06-08 Cryptology nowadays is one of the most important areas of applied mathematics building on deep results and methods from various areas of mathematics This text is devoted to the study of stochastic aspects of cryptology Besides classical topics from cryptology the author presents chapters on probabilistic prime number tests factorization with quantum computers random number generators pseudo random number generators information theory and the birthday paradox and meet in the middle attack In the light of the vast literature on stochastic results relevant for cryptology this book is intended as an invitation and introduction for students researchers and practitioners to probabilistic and statistical issues in cryptology *Statistical Methods in Cryptanalysis* Solomon Kullback,1976 *Boolean Functions in Coding Theory and Cryptography* Oleg A. Logachev,Alekse_ Aleksandrovich Sal_nikov,V. V. I_A_shchenko,2012-02-08 This book offers a systematic presentation of cryptographic and code theoretic aspects of the theory of Boolean functions Both classical and recent results are thoroughly presented Prerequisites for the book include basic knowledge of linear algebra group theory theory of finite fields combinatorics and probability The book can be used by research mathematicians and graduate students interested in discrete mathematics coding theory and cryptography Statistical Methods in Cryptography Wei Dai,2016 Cryptographic assumptions and security goals are fundamentally distributional As a result statistical techniques are ubiquitous in cryptographic constructions and proofs In this thesis we build upon existing techniques and seek to improve both theoretical and practical constructions in three fundamental primitives in cryptography blockciphers hash functions and encryption schemes First we present a tighter hybrid argument via collision probability that is more general than previously known allowing applications to blockciphers We then use our result to improve the bound of the Swap or Not cipher We also develop a new blockcipher composition theorem that is both class and security amplifying Second we prove a variant of Leftover Hash Lemma for joint leakage inspired by the Universal Computational Extractor UCE assumption We then apply this technique to construct various standard model UCE secure hash functions Third we survey existing lossy primitives in cryptography in particular Lossy Trapdoor Functions LTDF and Lossy Encryptions LE we propose a generalized primitive called Lossy Deterministic Encryption LDE We show that LDE is equivalent to LTDFs This is in contrast with the block box separation of trapdoor functions and public key encryption schemes in the computational case One common theme in our methods is the focus on statistical techniques Another theme is that the results obtained are in contrast with their computational counterparts the

corresponding computational results are implausible or are known to be false

Probabilistic and Statistical Methods in Cryptology Daniel Neuenschwander, 2014-01-15

Age of Deception Jon R. Lindsay, 2025-10-15

At the heart of cybersecurity lies a paradox Cooperation makes conflict possible In Age of Deception Jon R Lindsay shows that widespread trust in cyberspace enables espionage and subversion While such acts of secret statecraft have long been part of global politics digital systems have dramatically expanded their scope and scale Yet success in secret statecraft hinges less on sophisticated technology than on political context To make sense of this Lindsay offers a general theory of intelligence performance the analogue to military performance in battle that explains why spies and hackers alike depend on clandestine organizations and vulnerable institutions Through cases spanning codebreaking at Bletchley Park during WWII to the weaponization of pagers by Israel in 2024 he traces both continuity and change in secret statecraft Along the way he explains why popular assumptions about cyber warfare are profoundly misleading Offense does not simply dominate defense for example because the same digital complexity that expands opportunities for deception also creates potential for self deception and counterdeception Provocative and persuasive Age of Deception offers crucial insights into the future of secret statecraft in cyberspace and beyond

Post-Quantum Cryptography and IoT Communications for Sustainable Urban Development S., Baghavathi Priya, S., Subha, S., Sountharajan, Balusamy, Balamurugan, E., Suganya, 2025-10-09

The rise of quantum computing poses a major threat to traditional encryption methods potentially compromising the security of data that underpins critical smart city operations As urban infrastructures increasingly rely on

internet of things IoT systems for transportation energy public safety and resource management safeguarding these networks against quantum enabled cyberattacks become essential for resilience and stability Implementing post quantum cryptographic solutions ensures that sensitive information remains protected enabling cities to operate efficiently while maintaining public trust Strengthening IoT security in this way not only addresses immediate cybersecurity risks but also supports the long term sustainability and adaptability of urban environments Post Quantum Cryptography and IoT Communications for Sustainable Urban Development addresses the urgent need for secure IoT communications in smart city infrastructures by exploring quantum cryptographic solutions It focuses on this crucial challenge by exploring state of the art post quantum cryptographic algorithms designed to handle quantum attacks and threats thereby ensuring robust data security and integrity in urban IoT networks Covering topics such as quantum network attacks smart urban ecosystems and symmetric cryptography this book is an excellent resource for academicians researchers engineers technologists city planners and more
