

Weiss' Method

Weiss used a sequence of time varying images of a fixed scene to determine the reflectance edges of the scene

His method works by determining, from the image sequence, edges which correspond to a change in reflectance
(Weiss' definition of a reflectance edge is an edge which persists throughout the sequence)

Given reflectance edges, Weiss re-integrates the information to derive a reflectance image

In our case, we can borrow Weiss' re-integration procedure to recover our shadow-free image.
