Guided Self-Organization: Inception Mikhail Prokopenko,2013-12-19 Is it possible to guide the process of self organisation towards specific patterns and outcomes Wouldn t this be self contradictory After all a self organising process assumes a transition into a more organised form or towards a more structured functionality in the absence of centralised control Then how can we place the guiding elements so that they do not override rich choices potentially discoverable by an uncontrolled process This book presents different approaches to resolving this paradox In doing so the presented studies address a broad range of phenomena ranging from autopoietic systems to morphological computation and from small world networks to information cascades in swarms A large variety of methods is employed from spontaneous symmetry breaking to information dynamics to evolutionary algorithms creating a rich spectrum reflecting this emerging field Demonstrating several foundational theories and frameworks as well as innovative practical implementations *Guided Self Organisation Inception* will be an invaluable tool for advanced students and researchers in a multiplicity of fields across computer science physics and biology including information theory robotics dynamical systems graph theory artificial life multi agent systems theory of computation and machine learning
