Transformed Cladistics Taxonomy And Evolution:

Transformed Cladistics, Taxonomy and Evolution N. R. Scott-Ram, 1990-03-30 This is an examination of the relationship between classification and evolutionary theory with reference to the competing schools of taxonomic thinking Emphasis is placed on one of these schools the transformed cladists who have attempted to reject all evolutionary thinking in classification and to cast doubt on evolution in general The author examines the limits to this line of thought from a philosophical and methodological perspective He concludes that transformed cladistics does not achieve what it claims and that it either implicitly assumes a Platonic World View or is unintelligible without taking into account evolutionary processes the very processes it claims to reject Through this analysis the author attempts to formulate criteria of an objective and consistent nature that can be used to judge competing methodologies and theories Philosophers of science zoologists interested in taxonomy and evolutionary biologists will find this a compelling study

Transformed Cladistics, Taxonomy and Evolution N. R. Scott-Ram, 1984

Cladistics David M. Williams, Malte C. Ebach, 2020-08-06 This new edition of a foundational text presents a contemporary review of cladistics as applied to biological classification It provides a comprehensive account of the past fifty years of discussion on the relationship between classification phylogeny and evolution It covers cladistics in the era of molecular data detailing new advances and ideas that have emerged over the last twenty five years Written in an accessible style by internationally renowned authors in the field readers are straightforwardly guided through fundamental principles and terminology Simple worked examples and easy to understand diagrams also help readers navigate complex problems that have perplexed scientists for centuries This practical guide is an essential addition for advanced undergraduates postgraduates and researchers in taxonomy systematics comparative biology evolutionary biology and molecular biology

Classification, Evolution, and the Nature of Biology Alec L. Panchen, 1992-06-26 Historically naturalists who proposed theories of evolution including Darwin and Wallace did so in order to explain the apparent relationship of natural classification This book begins by exploring the intimate historical relationship between patterns of classification and patterns of phylogeny However it is a circular argument to use the data for classification Alec Panchen presents other evidence for evolution in the form of a historically based but rigorously logical argument This is followed by a history of methods of classification and phylogeny reconstruction including current mathematical and molecular techniques The author makes the important claim that if the hierarchical pattern of classification is a real phenomenon then biology is unique as a science in making taxonomic statements This conclusion is reached by way of historical reviews of theories of evolutionary mechanism and the philosophy of science as applied to biology The book is addressed to biologists particularly taxonomists concerned with the history and philosophy of their subject and to philosophers of science concerned with biology It is also an important source book on methods of classification and the logic of evolutionary theory for students professional biologists and paleontologists
